OFFICIAL ARCHITECTURE REFERENCE MANUAL

Campus Pulse

Complete Technical Documentation, Architecture, Functionality & File-by-File Analysis

System Version: v1.0.0 (Production Verified)

Architecture Tier: FastAPI + React 19 + SQLite (WAL Mode) + Tailwind CSS v4

Source Repository: `CampusPulse_co`

Cataloged Scope: 527 Files • 277 REST Endpoints • 196 Relational Tables • 6 RBAC Roles

Date of Publication: October 2026

Campus Pulse — Technical Master Guide & System Architecture

> **Document Type:** Master Architectural Guide & System Overview
> **Status:** Production-Verified against Active Codebase
> **Repository:** Campus Pulse (`CampusPulse_co`)
> **Target Audience:** Software Architects, Full-Stack Engineers, DevOps, System Administrators

1. Executive Introduction & System Overview (Part 1)

1.1 What is Campus Pulse?

Campus Pulse is a centralized, multi-role campus operations and complaint lifecycle management system designed for universities and residential collegiate institutions. It bridges the communication gap between students, facility wardens, departmental maintenance coordinators, operational app managers, and senior college administrators.

1.2 The Problem It Solves

Traditional university campus maintenance relies on fragmented communication channels (WhatsApp groups, physical complaint registers, informal phone calls, or unmonitored email inboxes). This creates several critical failure points: 1. **Zero Accountability:** Grievances are lost, ignored, or untracked. 2. **Slow Resolution:** Maintenance technicians are not notified automatically. 3. **Premature Closures:** Work is claimed to be complete without student verification. 4. **No Service Level Agreements (SLAs):** Critical hazards (e.g., electrical sparking, water leaks) languish without automated escalation. 5. **No Historical Intelligence:** Campus administrators have no macro-level visibility into recurring failure points across hostels and departments.

Campus Pulse replaces this with an automated, SLA-driven state machine with proof-of-work uploads, mandatory student verification windows, real-time push notifications, and administrative analytics.

1.3 Intended Users & Operating Philosophy

Campus Pulse serves six distinct campus roles: - **Students:** Report grievances, track status, verify or reopen resolutions, view official announcements, and report lost & found items. - **Coordinators:** Department-level staff (Plumbing, Electrical, IT, Mess) who receive routed issues, update progress, and upload resolution proof. - **Wardens / Location In-Charges:** Facility supervisors (Hostels, Messes, Sports) overseeing physical buildings and broadcasting hostel circulars. - **App Managers:** Operational supervisors managing multiple campus facilities, reallocating workloads, and reviewing compliance. - **Administrators:** Institutional authorities controlling user accounts, facilities, departments, database backups, and institutional settings. - **Super Admins:** Multi-tenant platform administrators managing institution onboarding and cross-platform health.

Core Operating Philosophy: - **Zero-Drop Routing:** No complaint can be orphaned; automatic fallbacks escalate unassigned issues to facility wardens or managers. - **Student-First Verification:** Staff cannot unilaterally close a complaint. A 48-hour student verification window ensures genuine satisfaction. - **Transparent Governance:** Every administrative action is logged to an immutable audit trail.

```

2. Documentation Package Directory & Index

To ensure deep technical rigor without overwhelming a single file, this documentation is structured into specialized, cross-referenced modules:

Document File	Core Content Covered	Key Target Audience
`docs/CAMPUS_PULSE_TECHNICAL_MASTER_GUIDE.md`	**Master Guide (This File)**: System overview, developer cheatsheets, onboarding guide	All Engineers & Architects
`docs/TECH_STACK_AND_DESIGN_DECISIONS.md`	**Parts 2 & 13**: Language inventory (6 languages), libraries, decision table, architecture trade-offs	Architects & Tech Leads
`docs/ARCHITECTURE_AND_DATA_FLOW.md`	**Parts 3 & 15**: 20-layer architecture, 16 step-by-step end-to-end execution traces	Full-Stack Developers
`docs/DATABASE_AND_DATA_MODEL.md`	**Part 4**: Database schema, PRAGMA settings, table specs, ER diagram, retention policies	Database Engineers
`docs/SECURITY_AUTHENTICATION_AND_NOTIFICATIONS.md`	**Parts 5 & 7**: RBAC matrix, sessions, PBKDF2 hashing, tokens, notification pipeline	Security Engineers & DevOps
`docs/FUNCTIONALITY_DEEP_DIVE.md`	**Part 6**: Exhaustive 14-point template specifications for all verified modules	Product Engineers
`docs/API_REFERENCE_AND_PERMISSIONS.md`	**Part 8**: 277 REST endpoints directory, request schemas, HTTP statuses, permissions	Frontend/API Integrators
`docs/TESTING_DEPLOYMENT_AND_OPERATIONS.md`	**Parts 10, 11 & 12**: QA test runs, environment variables, Docker, deployment, technical debt	QA & DevOps Engineers
`docs/FILE_BY_FILE_REFERENCE.md`	**Part 14**: Exhaustive file-by-file inventory of all 527 files across the entire codebase	Maintainers & Reviewers

---

3. Developer Quick Reference Guide (Part 16)

A. Technology Cheat Sheet

- **Backend Framework:** FastAPI 0.109+ on Python 3.10+ (Running on Python 3.14.2).
- **ASGI Web Server:** Uvicorn 0.27+ with WatchFiles reload.
- **Frontend Framework:** React 19.2.7 with React Router DOM 7.18.
- **Build Tool:** Vite 8.1.3 with Rollup bundling.
- **Styling System:** Tailwind CSS 4.3.2 with PostCSS.
- **Persistence Engine:** SQLite 3 in WAL mode (`campus_pulse.db`).
- **Data Validation:** Pydantic 2.6+ with type hinting.
- **HTTP Transport:** Axios 1.18+ with bearer token interceptors.
- **Automated Testing:** Pytest 8.0+ (Backend) and Vitest 3.0+ (Frontend).

B. Role & Permission Cheat Sheet

Role	Database Value	Scope	Key Capabilities	Prohibited Capabilities
Super Admin	`super_admin`	Multi-Tenant Platform	Onboard institutions, monitor platform health	Campus daily operations
Administrator	`administrator`	College / Campus	User management, settings, backups, notices	Cross-tenant access
App Manager	`app_manager`	Multi-Facility	Reassign complaints, facility oversight, notices	System root config
Location In-Charge	`location_in_charge`	Single Building (Hostel)	Manage facility issues, post hostel notices	Modify depts/users
Coordinator	`coordinator`	Single Department	Resolve complaints, upload proof, internal notes	**Cannot post notices**
Student	`student`	Personal Complaints	Report issues, verify/reopen, Lost & Found	**Cannot post notices**

C. File Navigation Guide

Where to look when modifying specific aspects of Campus Pulse:

What You Need to Change	Primary Frontend Location	Primary Backend Location	Key Database Table
A page, button, or modal	`Frontend/src/pages/`	N/A	N/A
An API endpoint handler	`Frontend/src/services/`	`Backend/api/routers/`	N/A
A database column or model	UI form fields	`Backend/models/` , `Backend/services/`	PRAGMA alter / schema script
A role permission or guard	`Frontend/src/routes/ProtectedRoute.jsx`	`Backend/api/security.py`	`users.role`
An in-app notification	`Frontend/src/pages/NotificationsPage.jsx`	`Backend/services/notification_service.py`	`notifications`
Transactional email / token	`Frontend/src/pages/auth/`	`Backend/utils/email.py`	`activation_tokens`
Complaint state transition	`Frontend/src/pages/complaints/`	`Backend/services/complaint_service.py`	`complaints.status`
File upload or attachment	File input handlers	`Backend/services/attachment_service.py`	`attachments`
A scheduled cron job	N/A	`Backend/services/scheduler_service.py`	`scheduled_jobs`
An automated test suite	`Frontend/src/__tests__/`	`Backend/tests/`	Test SQLite DB

D. Common Debugging Guide

1. **Investigating Backend HTTP Errors:**
2. Review log entries in `Backend/logs/app.log` or terminal output.
3. Look for format: `Method: POST | Path: /complaints | Status: 400 | User: USR_STUDENT | Time: 12.4ms`.
4. **Investigating 403 Forbidden Access Errors:**
5. Look for log warning: `403 Forbidden - Reason: Role 'coordinator' attempted 'POST /announcements', Required: ('administrator', ...)`.
6. Check `Backend/api/security.py` and router dependency `require_roles()`.
7. **Investigating Database Locks (`database is locked`):**
8. Ensure PRAGMA WAL mode is active: `PRAGMA journal_mode;` returns `wal`.
9. Confirm long-running transactions are wrapped in short-lived `with self._connect() as conn:` context managers.
10. **Verifying System Health After Modifications:**
11. Run smoke test: `python Backend/tests/smoke_test.py` (Must yield 19/19 PASS).
12. Run workflow tests: `python -m pytest Backend/tests/test_workflow8_announcements.py`.

E. New Developer Onboarding Guide

To set up and run Campus Pulse from scratch on a new developer workstation:

1. **Prerequisites:**
2. Python 3.10+ (verified on Python 3.14).
3. Node.js 18+ and npm.
4. **Backend Setup:** `bash cd Backend python -m venv venv # Windows: venv\Scripts\activate | Linux: source venv/bin/activate pip install -r requirements.txt python run_api.py` *Verification:* Open `http://127.0.0.1:8000/docs` in your browser.
5. **Frontend Setup:** `bash cd Frontend npm install npm run dev` *Verification:* Open `http://127.0.0.1:5173/` in your browser.
6. **Login with Verified Seed Accounts:**
7. **Administrator:** `gowthamejjurothu@gmail.com` / `Admin@123`
8. **App Manager:** `ejjurothugowtham@gmail.com` / `Manager@123`
9. **Hostel Warden:** `naveen@campus.edu` / `warden@123`
10. **Coordinator:** `gowthamejjurothu15@gmail.com` / `Coordinator@123`
11. **Student:** `gowtham.e23@iiits.in` / `Student@123`
12. **Run Test Suites:** `bash python Backend/tests/smoke_test.py npm test`

4. Documentation Completeness Checklist (Part 16.J)

Section / Topic	Status	Verified Document Reference
Part 1: Project Overview & Philosophy	**Complete**	`docs/CAMPUS_PULSE_TECHNICAL_MASTER_GUIDE.md`
Part 2: Technology & Language Inventory (6 Languages)	**Complete**	`docs/TECH_STACK_AND_DESIGN_DECISIONS.md`
Part 3: 20-Layer Architecture & Connections	**Complete**	`docs/ARCHITECTURE_AND_DATA_FLOW.md`
Part 4: Database & Schema Specification (196 Tables)	**Complete**	`docs/DATABASE_AND_DATA_MODEL.md`
Part 5: Role-Based Access Control Matrix (6 Roles)	**Complete**	`docs/SECURITY_AUTHENTICATION_AND_NOTIFICATIONS.md`
Part 6: Exhaustive Functionality Catalogue (14-Points)	**Complete**	`docs/FUNCTIONALITY_DEEP_DIVE.md`
Part 7: Deep Dive into Specific Shared Mechanisms	**Complete**	`docs/SECURITY_AUTHENTICATION_AND_NOTIFICATIONS.md`
Part 8: Complete API Inventory (277 Endpoints)	**Complete**	`docs/API_REFERENCE_AND_PERMISSIONS.md`
Part 9: Frontend Architecture & UI UX	**Complete**	`docs/ARCHITECTURE_AND_DATA_FLOW.md`
Part 10: Testing & QA Verification Report	**Complete**	`docs/TESTING_DEPLOYMENT_AND_OPERATIONS.md`
Part 11: Configuration, Environment & Deployment	**Complete**	`docs/TESTING_DEPLOYMENT_AND_OPERATIONS.md`
Part 12: Bugs, Fixes, Limitations & Technical Debt	**Complete**	`docs/TESTING_DEPLOYMENT_AND_OPERATIONS.md`
Part 13: Architectural Design Decisions Analysis	**Complete**	`docs/TECH_STACK_AND_DESIGN_DECISIONS.md`
Part 14: Complete File-by-File Inventory (527 Files)	**Complete**	`docs/FILE_BY_FILE_REFERENCE.md`
Part 15: 16 Step-by-Step End-to-End Traces	**Complete**	`docs/ARCHITECTURE_AND_DATA_FLOW.md`
Part 16: Developer Reference Cheatsheets & Guides	**Complete**	`docs/CAMPUS_PULSE_TECHNICAL_MASTER_GUIDE.md`

Campus Pulse — Technology Stack, Languages & Architectural Design Decisions

> **Document Type:** Core Architectural Specification & Technology Inventory
> **Status:** Verified against Source Code
> **Repository:** Campus Pulse (`CampusPulse_co`)
> **Target Audience:** Principal Engineers, Architects, Backend/Frontend Developers, Security Reviewers

1. Executive Summary & Purpose

Campus Pulse is an enterprise-grade campus operations and complaint lifecycle management platform designed to automate, route, escalate, and resolve student grievances and facility issues across decentralized university campuses. This document provides a rigorous, source-code-driven inventory of every programming language, library, framework, runtime, database engine, build tool, and architectural decision implemented in the project.

Every claim herein is directly grounded in the source code, dependency manifests (`Backend/requirements.txt` , `Frontend/package.json`), database schemas, configuration files, and test suites. Where an original historical rationale was not formally documented in repository commit messages or markdown files, it is explicitly identified as **"Undocumented in original repository records"** and accompanied by an objective **Engineering Assessment**.

2. Programming Languages Inventory

The Campus Pulse codebase utilizes six distinct language paradigms across its backend services, frontend web application, persistent storage, build systems, and operational tooling.

ARCHITECTURE FLOW DIAGRAM

```
graph TD
    subgraph Frontend ["Frontend Environment (Browser Runtime)"]
        JS[JavaScript / ECMAScript 2022+] --> JSX[React 19 JSX]
        CSS[Tailwind CSS v4 Engine] --> DOM[DOM Styling & Responsive Layout]
        HTML[HTML5 Semantic Root] --> Mount[Root Div Application Mount]
    end

    subgraph Backend ["Backend Environment (CPython 3.10 - 3.14)"]
        PY[Python 3 Engine] --> FastAPI[FastAPI REST Application]
        PY --> Services[Business Services Layer]
        PY --> Pytest[Automated Pytest Suite]
    end

    subgraph Database ["Persistence Layer"]
        SQL[ANSI SQL / SQLite Dialect] --> SQLiteDB[(SQLite 3 WAL Database)]
    end

    subgraph Tooling ["Infrastructure & Automation"]
        Shell[PowerShell & POSIX Shell] --> CLI[Dev Ops & Test Automation]
    end

    JSX -- "HTTP / REST & WebSocket" --> FastAPI
    Services -- "Python sqlite3 DB-API" --> SQL
    SQL --> SQLiteDB
```

2.1 Python

1. **Language Name & Version:** Python (CPython 3.10+ compatible; verified running on Python 3.14.2).
2. **Where Used:** Entire backend application (`Backend/api/` , `Backend/models/` , `Backend/services/` , `Backend/middleware/` , `Backend/utils/` , `Backend/scripts/` , `Backend/tests/`).
3. **Exact File Locations:** 141 Python files across the `Backend/` directory tree, entry point at `Backend/run_api.py` .
4. **Responsibility:** Implements all backend RESTful API endpoints, request validation, authentication and session management, role-based authorization, routing engine, escalation scheduler, database querying, email delivery, file storage validation, audit logging, and automated integration testing.
5. **Syntax, Features & Patterns:**
6. **Type Hinting & Schemas:** Extensive use of `typing` (`Optional` , `List` , `Dict` , `Union`) combined with `pydantic.BaseModel` for schema parsing and serialization.
7. **Asynchronous & Synchronous Concurrency:** Async route handlers alongside thread-pooled synchronous execution (`asynccontextmanager` in `Backend/api/main.py`).
8. **Context Managers:** SQLite connection context management (`with self._connect() as conn:`) ensuring safe transaction commit and auto-closing.
9. **Dependency Injection:** FastAPI's `Depends()` pattern across `Backend/api/dependencies.py` and `Backend/api/security.py` for service singleton caching and RBAC verification.
10. **Object-Oriented Encapsulation:** Service classes (`AuthService` , `ComplaintService` , `NotificationService` , `AnnouncementService`) encapsulating business logic.

11. **Communication with Other Layers:** Communicates with the browser via HTTP/1.1 and WebSockets (FastAPI Starlette ASGI). Communicates with SQLite persistence via Python's standard `sqlite3` driver using parameter-bound queries.
12. **Appropriateness:** Excellent balance of rapid development velocity, clean data-modelling semantics, native SQLite integration, and strong ASGI asynchronous ecosystem.
13. **Alternatives:**
14. *Node.js / TypeScript:* Faster asynchronous raw I/O, unified language between frontend and backend.
15. *Go:* Minimal memory footprint, high concurrent throughput, single-binary static deployments.
16. *Java / Spring Boot:* Heavy enterprise footprint, strong typing, verbose ceremony.
17. **Trade-offs:** High developer productivity and standard library maturity; trade-off is Global Interpreter Lock (GIL) and lower CPU-bound throughput compared to compiled languages (mitigated by I/O bound nature of campus management operations).
18. **Architecture Role:** Essential core backend runtime.

2.2 JavaScript (ECMAScript 2022+ / JSX)

1. **Language Name & Version:** JavaScript (ES2022+ with React JSX extensions).
2. **Where Used:** Entire frontend client application (`Frontend/src/`).
3. **Exact File Locations:** 70 `.jsx` component/page files, 29 `.js` service/utility/hook files, configuration scripts (`Frontend/vite.config.js`).
4. **Responsibility:** Implements client-side Single Page Application (SPA), state management, routing, form validation, dynamic modal rendering, asynchronous API communication via Axios, and UI interactivity.
5. **Syntax, Features & Patterns:**
6. **React Functional Components & Hooks:** `useState` , `useEffect` , `useMemo` , `useCallback` , `useContext` , custom `useAsyncData` .
7. **Modern ES Features:** Optional chaining (`?.`), nullish coalescing (`??`), async/await, array destructuring, spread operators.
8. **Context API:** `AuthContext` managing reactive session persistence, user credentials, and logout broadcast.
9. **Promise Chaining & Interceptors:** Centralized Axios instance intercepting requests to inject session headers and handling 401/403 errors.
10. **Communication with Other Layers:** Communicates with the Backend API over HTTP via JSON payloads; renders directly to the browser DOM via React 19.
11. **Appropriateness:** Universal browser support, massive UI component ecosystem, declarative component hierarchy.
12. **Alternatives:**
13. *TypeScript:* Static compile-time type verification (would improve refactoring safety).
14. *Vue.js / Svelte:* Simpler reactivity model, smaller runtime bundle.
15. **Trade-offs:** Extremely rapid feature development and declarative UI rendering; lack of TypeScript compile-time types requires runtime prop validation.
16. **Architecture Role:** Essential core frontend runtime.

2.3 SQL (Structured Query Language — SQLite Dialect)

1. **Language Name & Dialect:** ANSI SQL with SQLite 3 extensions.
2. **Where Used:** Data Access Layer throughout `Backend/services/*.py` and schema scripts in `Backend/scripts/` .
3. **Exact File Locations:** Embedded parameterized SQL queries across 32 backend service files and database scripts.
4. **Responsibility:** Table creation, index definition, foreign key constraint enforcement, relational joins, ACID transactions, data querying, and aggregation.
5. **Syntax, Features & Patterns:**
6. **Parameterized Queries:** Strict use of `?` positional parameters to eliminate SQL injection vulnerabilities.
7. **Relational Joins:** Multi-table joins (`LEFT JOIN` , `INNER JOIN`) linking complaints with users, departments, locations, and attachments.
8. **Aggregations:** `COUNT` , `SUM` , `AVG` , `GROUP BY` , `DATE()` date truncations.
9. **Transaction Directives:** Explicit `BEGIN IMMEDIATE` , `COMMIT` , `ROLLBACK` for multi-step mutations.
10. **Communication with Other Layers:** Executed by Python's `sqlite3.Cursor` and `sqlite3.Connection` , returning tabular data converted into dictionary rows (`sqlite3.Row`).
11. **Appropriateness:** Zero-configuration, serverless, self-contained, lightning-fast in-process execution with ACID guarantees.
12. **Alternatives:**
13. *PostgreSQL:* Full client-server database, concurrent writes, row-level locking, rich JSONB operations.
14. *MySQL / MariaDB:* Widespread LAMP stack database.
15. **Trade-offs:** Zero administrative overhead and single-file portability; trade-off is file-level write locking which restricts massive concurrent write scaling.
16. **Architecture Role:** Essential core persistence language.

2.4 CSS / Styling (Tailwind CSS v4)

1. **Language & Tool:** CSS3 with Tailwind CSS utility classes and modern `@tailwindcss/postcss` integration.
2. **Where Used:** `Frontend/src/index.css` and utility classes embedded across all 70 JSX files.
3. **Exact File Locations:** `Frontend/src/index.css` .
4. **Responsibility:** Styling, visual hierarchy, dark mode theming (`class="dark"`), typography, flexbox/grid layouts, responsive breakpoints (`sm:` , `md:` , `lg:`), and micro-animations.
5. **Syntax, Features & Patterns:**
6. Tailwind utility-first styling (`flex items-center justify-between p-4 bg-white dark:bg-slate-900 rounded-xl`).
7. CSS custom properties (`var(--color-primary)`).
8. Responsive design variants and pseudo-classes (`hover:` , `focus:` , `disabled:`).
9. **Communication with Other Layers:** Processed at build time by PostCSS into optimized, purged CSS bundles consumed by the browser DOM.
10. **Appropriateness:** Prevents bloated custom CSS stylesheets, enforces consistent design tokens (colors, margins, typography), eliminates dead styling rules.
11. **Alternatives:** Plain vanilla CSS, CSS Modules, Styled-Components, Sass/SCSS.
12. **Trade-offs:** Faster UI iteration and tiny production CSS footprint; class strings in JSX templates can become verbose.
13. **Architecture Role:** Essential UI styling language.

2.5 HTML (HyperText Markup Language)

1. **Language & Standard:** HTML5.
2. **Where Used:** Application host shell `Frontend/index.html`.
3. **Exact File Locations:** `Frontend/index.html`.
4. **Responsibility:** Provides the initial Document Object Model (DOM) root `<div id="root"></div>`, meta tags, viewport configurations, and script entry points for Vite bundling.
5. **Syntax & Features:** Standard HTML5 semantic structure.
6. **Communication with Other Layers:** Hosts the React DOM tree mounted by `Frontend/src/main.jsx`.
7. **Appropriateness:** Universal web platform standard.
8. **Architecture Role:** Essential application host document.

2.6 Shell Scripting (PowerShell & POSIX Shell)

1. **Language:** PowerShell (Windows) and POSIX Shell (Docker).
2. **Where Used:** Automated build triggers, smoke test automation, process management, and Docker entry points.
3. **Responsibility:** Automation, testing, environment setup, and service orchestration.
4. **Architecture Role:** Supporting development and deployment language.

---

3. Language Subgroups and Architectural Responsibilities

The codebase organizes languages into functional tiers. The table below traces their responsibilities and interactions:

Subgroup	Languages Used	Primary Directory	Key Responsibilities
Backend REST & Business Logic	Python 3	`Backend/api/`, `Backend/services/`	API routing, Pydantic validation, business rules, RBAC checks
Backend Models & Data Access	Python 3, SQL	`Backend/models/`, `Backend/services/`	Entity abstractions, parameterized SQL queries, transaction management
Backend Security & Middleware	Python 3	`Backend/middleware/`, `Backend/api/security.py`	Rate limiting, CORS, session hashing, security headers
Frontend Single Page App	JavaScript (ES2022+), JSX	`Frontend/src/`	View rendering, client routing, user state, Axios calls
Frontend Styling & Design	CSS3, Tailwind CSS v4	`Frontend/src/index.css`, JSX	Design system, responsive grids, dark/light themes
Persistence & Storage	SQL (SQLite)	`Backend/storage/*.db`	Relational tables, foreign key constraints, indexes, WAL journal
Automated Testing	Python 3 (Pytest), JavaScript (Vitest)	`Backend/tests/`, `Frontend/src/__tests__/`	Unit, integration, workflow, security, and component tests
DevOps & Containers	YAML, Dockerfile, Shell	Root, `Backend/Dockerfile`, `docker-compose.yml`	Container images, multi-container orchestration

---

Request Trace Across Language Subgroups

The following trace illustrates how all subgroups interact during a complaint lifecycle event:

ARCHITECTURE FLOW DIAGRAM

```
sequenceDiagram
    autonumber
    actor Student as Student (Browser)
    participant UI as JSX Component (CreateComplaintPage.jsx)
    participant Service as JS Service (complaintService.js)
    participant API as Python FastAPI (complaints.py)
    participant Dep as Python Security (security.py)
    participant Svc as Python Service (complaint_service.py)
    participant DB as SQLite DB (campus_pulse.db)

    Student->>UI: Fills form & clicks "Submit Complaint"
    UI->>UI: Validates fields locally
    UI->>Service: Calls complaintService.create(payload)
    Service->>API: HTTP POST /complaints (JSON payload + Session Token)
    API->>Dep: get_current_user() & require_roles()
    Dep-->>API: Validates session token, returns User(role="student")
    API->>API: Validates ComplaintCreateRequest (Pydantic schema)
    API->>Svc: complaint_svc.create_complaint(data, student_id)
    Svc->>Svc: Evaluates routing logic (assigns Coordinator / Warden)
    Svc->>DB: Executes parameterized SQL INSERT INTO complaints ...
    DB-->>Svc: Returns new complaint_id & row
    Svc->>DB: Executes SQL INSERT INTO notifications ...
    Svc-->>API: Returns complaint dictionary
    API-->>Service: HTTP 201 Created (JSON Response)
    Service-->>UI: Resolves Promise with response data
    UI->>Student: Displays success Toast & navigates to /complaints
```

4. Frameworks, Libraries and Dependency Inventory

4.1 Backend Dependencies (Python)

Verified from `Backend/requirements.txt` and active virtual environment:

Library / Tool	Verified Version	Purpose in Campus Pulse	Usage Evidence & Key Imports	Alternatives	Trade-offs
FastAPI	0.109.0+	Core web API framework, dependency injection, OpenAPI generation	`from fastapi import FastAPI, Depends, HTTPException, Query, Request` in all routers	Flask, Django REST Framework, Tornado	High performance, automatic Swagger UI, declarative typing; requires async/await awareness
Uvicorn	0.27.0+	Lightning-fast ASGI web server implementation	`uvicorn.run("api.main:app", host=host, port=port, reload=reload)` in `run_api.py`	Hypercorn, Gunicorn, Daphne	Standard high-performance ASGI server; requires process manager (Gunicorn) in production
Pydantic	2.6.0+	Data validation, request body schemas, response serialisation	`from pydantic import BaseModel, Field, EmailStr` across routers and models	Marshmallow, Cerberus, attrs	Extremely fast Rust-based validation (Pydantic v2); strict validation errors on type mismatch
Pytest	8.0.0+	Test framework for unit, integration, and security testing	`import pytest` across 31 test files in `Backend/tests/`	unittest, nose2	Rich fixture architecture, expressive assertions; external test runner
python-multipart	0.0.6+	Streaming file uploads and multipart/form-data parsing	Used by FastAPI for file attachment endpoints in `attachments.py`	Built-in cgi (deprecated)	Required for file upload streaming in FastAPI
python-jose	3.3.0+	Cryptographic token handling (available in dependency manifest)	Declared in requirements; project primarily utilizes DB-backed session tokens	PyJWT, Authlib	Standard JWT library; project opts for opaque session tokens for instant revocation
passlib	1.7.4+	Password hashing abstractions	Declared in requirements; project core uses Python `hashlib.pbkdf2_hmac` directly	bcrypt, argon2-cffi	Abstracted interface; direct standard library PBKDF2 used for zero-dependency reliability
requests	2.31.0+	Synchronous HTTP client for automated smoke and workflow tests	`import requests` in `smoke_test.py` and test harnesses	httpx, aiohttp, urllib3	Simple API for testing; synchronous only

4.2 Frontend Dependencies (Node.js / React)

Verified from `Frontend/package.json` :

Package	Declared Version	Purpose in Campus Pulse	Key Components Utilizing It	Alternatives	Trade-offs
React	19.2.7	UI component architecture and declarative rendering	All `.jsx` components and pages	Vue 3, Svelte 5, Angular	Industry standard declarative UI; large ecosystem
React DOM	19.2.7	DOM renderer for React components	`Frontend/src/main.jsx`	React Native (mobile)	Standard web DOM adapter
React Router DOM	7.18.1	Declarative client-side routing and protected route guards	`Frontend/src/routes/AppRoutes.jsx`, `ProtectedRoute.jsx`	TanStack Router, Next.js	Dynamic client routing with nested layouts and RBAC guards
Axios	1.18.1	Promise-based HTTP client with request/response interceptors	`Frontend/src/api/axios.js` and all 19 service files	Fetch API, ky, wretch	Automatic JSON serialization, global request/error interceptors
Lucide React	1.23.0	Modern SVG icon system for UI controls and dashboards	Across all pages, tables, navigation sidebar, and cards	React Icons, FontAwesome, Heroicons	Lightweight tree-shakeable SVG icons
Recharts	3.9.2	Composable charting library for analytics dashboards	`Frontend/src/pages/AnalyticsPage.jsx`, `DashboardChart.jsx`	Chart.js, ApexCharts, D3.js	Declarative React-native SVG chart rendering
React Hook Form	7.81.0	High-performance form state management and validation	Form components and modals	Formik, native form state	Minimal re-renders during form input
Tailwind CSS	4.3.2	Utility-first CSS framework and styling engine	`@tailwindcss/postcss` in `Frontend/postcss.config.js`	Tailwind v3, CSS Modules, Bootstrap	Zero-runtime CSS extraction, fast styling workflow
Vite	8.1.3	Next-generation frontend build tool and dev server	`Frontend/vite.config.js`, `package.json`	Webpack, Turbopack, Rollup	Lightning-fast Hot Module Replacement (HMR) and optimized Rollup builds
Vitest	3.0.0	Vite-native unit test runner	`Frontend/src/__tests__/*.test.jsx`	Jest, Mocha	Instant test execution sharing Vite's configuration pipeline

5. Technology Decision Matrix & Alternatives Analysis

Technology / Choice	Actual Purpose in Project	Viable Alternatives	Why Choice is Reasonable	Original Rationale Verified?	Engineering Trade-offs & Limitations
Python + FastAPI	Backend REST API & business rules	Node.js (Express/Nest), Java (Spring), Go	Clean Pydantic validation, automatic OpenAPI, high developer velocity	Undocumented in original repo	GIL limits CPU bound tasks; higher memory than Go; mitigated by I/O bound database workflows
React 19 + Vite	SPA Frontend & Dashboard	Next.js (SSR), Vue 3, Vanilla JS	Component modularity, rich chart ecosystem, instant Vite HMR	Undocumented in original repo	Client-rendered SPA has initial bundle load; no SSR/SEO (unnecessary for internal campus portal)
SQLite 3 (WAL mode)	Relational database persistence	PostgreSQL, MySQL, MongoDB	Zero setup, embedded in-process speed, file portability, single-file backups	Undocumented in original repo	Single-writer concurrency lock; excellent for single-campus deployments, but requires migration for distributed clustering
Database Sessions	Stateful auth token management	Stateless JWT, OAuth2 / OIDC	Immediate token revocation upon logout or password change; no stale tokens	Documented in `Backend/api/security.py`	Requires database lookup per request (cached/indexed on token hash); stateful session cleanup required
PBKDF2-HMAC-SHA256	Password storage hashing	bcrypt, Argon2id, scrypt	Python standard library native (`hashlib`); zero external C-extension build failures	Documented in `Backend/utils/passwords.py`	Slightly higher iteration requirement than Argon2, but 100% portable across Windows/Linux without compilation tools
Direct SMTP (smtplib)	Transactional email delivery	SendGrid API, AWS SES, Resend	Protocol standard; compatible with standard university mail servers and Gmail SMTP	Verified in `Backend/utils/email.py`	Synchronous network latency if not dispatched in background task; depends on outbound port 587 availability
Local File Storage	Attachment storage (images/PDFs)	AWS S3, Cloudflare R2, MinIO	Zero cloud costs; direct disk I/O; complete local privacy for campus documents	Verified in `Backend/services/attachment_service.py`	Storage bounded by host disk; lacks automatic multi-region CDN replication
Tailwind CSS v4	UI Styling & Design System	CSS Modules, Styled-Components	Purged minimal CSS bundle, rapid UI iteration, consistent design tokens	Verified in `Frontend/src/index.css`	High class density in JSX markup; requires learning utility naming conventions

6. Deep Dive into Architectural Design Decisions (Part 13 Requirement)

Decision 1: Database-Backed Opaque Session Tokens vs Stateless JWTs

- **Decision:** The application issues a high-entropy random token (`secrets.token_urlsafe(32)`), stores its SHA-256 hash in the `user_sessions` SQLite table, and transmits the token via `Bearer` Authorization headers.
- **Problem Addressed:** In a university environment, immediate revocation of sessions upon password changes, account deactivation, or administrative suspension is critical. Stateless JWTs cannot be invalidated without complex distributed blacklists until their expiry timestamp.
- **Implementation Evidence:** `Backend/api/security.py` functions `create_session()` , `_lookup_session()` , `delete_session()` , and `revoke_user_sessions()` .
- **Benefits:** Instant revocation, auditability of active user devices, sliding expiration support, no signature forgery risks.
- **Trade-offs:** Every authenticated request requires a database lookup against `user_sessions` (mitigated by an index on `session_token`).
- **Engineering Assessment:** Highly sound architectural choice for security and immediate credential invalidation.

Decision 2: Native Standard Library Cryptography (PBKDF2) vs External C-Extensions

- **Decision:** Utilizing Python's `hashlib.pbkdf2_hmac` with 100,000 iterations and per-user cryptographic salts (`secrets.token_hex(16)`).
- **Problem Addressed:** Eliminating brittle native C compilation dependencies (such as `bcrypt` or `argon2-cffi` wheel compilation) on diverse developer environments (Windows PowerShell vs Linux Docker).
- **Implementation Evidence:** `Backend/utils/passwords.py` .
- **Benefits:** 100% platform portability, zero wheel compilation failures, standard FIPS-compliant cryptographic hashing.
- **Trade-offs:** Argon2id offers superior memory-hard resistance against ASIC hardware cracking; however, 100,000 iterations of PBKDF2-HMAC-SHA256 provides robust defense for campus portal usage.
- **Engineering Assessment:** Excellent pragmatic balance between security and operational reliability across mixed OS environments.

Decision 3: SQLite Write-Ahead Logging (WAL) and Connection Per Transaction

- **Decision:** Using SQLite in `WAL` mode (`PRAGMA journal_mode=WAL; PRAGMA foreign_keys=ON;`) with short-lived connections managed by Python context managers.
- **Problem Addressed:** SQLite's default rollback journal locks the entire database during writes, blocking concurrent readers.
- **Implementation Evidence:** `Backend/services/auth_service.py` and `Backend/services/complaint_service.py` connection factories.
- **Benefits:** Multiple concurrent readers can execute simultaneously while a write is underway. Eliminates reader-writer starvation.
- **Trade-offs:** Write throughput is serialized to a single writer. While sufficient for university operations (hundreds of complaints daily), massive enterprise workloads require migration to PostgreSQL.
- **Engineering Assessment:** Appropriate for current project scale; deployment architecture must ensure SQLite file is placed on local SSD, never network-mounted storage (NFS).

Decision 4: Centralized Role-Based Access Control via Dependency Inversion

- **Decision:** Authorization is enforced via reusable FastAPI dependencies (`require_roles()` , `require_super_admin()`) rather than manual checks scattered inside route bodies.
- **Problem Addressed:** Preventing authorization bypass bugs where a developer forgets to check permissions in an endpoint handler.
- **Implementation Evidence:** `Backend/api/security.py` .
- **Benefits:** Declarative, tamper-proof route protection; automatic 403 Forbidden responses before business logic is entered.
- **Trade-offs:** Object-level authorization (verifying if a student owns a specific complaint) must still be enforced within the service layer.
- **Engineering Assessment:** Clean, maintainable, idiomatic implementation of modern API security principles.

Campus Pulse — Complete Application Architecture & End-to-End Data Flow

> **Document Type:** Core Architectural Specification & Functional Flow Analysis
> **Status:** Verified against Source Code
> **Repository:** Campus Pulse (`CampusPulse_co`)

---

1. System Overview & The 20 Architectural Layers

The Campus Pulse architecture is organized into twenty distinct layers spanning the browser client, network perimeter, application server, business logic, asynchronous services, and storage persistence.

ARCHITECTURE FLOW DIAGRAM

```
graph TD
    subgraph Client ["Client Tier (Browser)"]
        L1[Layer 1: Browser DOM & React 19 UI]
        L2[Layer 2: React Router v7 Routing]
        L3[Layer 3: UI Components & Layout Shells]
        L4[Layer 4: State Management & AuthContext]
        L5[Layer 5: Axios API Client & Interceptors]

Detailed Analysis of the 20 Verified Layers

Layer 1: Browser DOM & User Interface

- **Responsibility:** Renders interactive HTML/CSS elements to the student or staff user.
- **Entry Point:** `Frontend/index.html` mounting `Frontend/src/main.jsx` .
- **Implementation:** React 19 root (`createRoot(document.getElementById('root'))`).
- **Dependencies:** React DOM, Tailwind CSS utility classes.

Layer 2: Frontend Routing

- **Responsibility:** Maps browser URLs to view components; performs client-side route protection.
- **Entry Point:** `Frontend/src/routes/AppRoutes.jsx` .
- **Implementation:** React Router DOM v7 (`<BrowserRouter>` , `<Routes>` , `<Route>`).
- **Route Guarding:** `Frontend/src/routes/ProtectedRoute.jsx` checks `isAuthenticated` and user role permissions, redirecting unauthorized users to `/login` or `/403` .

Layer 3: UI Components and Layouts

- **Responsibility:** Reusable UI controls and persistent page shells.
- **Components:** Button, Card, Input, Modal, Table, Toast, PageHeader, StatCard, Badge, EmptyState.
- **Layouts:** `Frontend/src/layouts/Sidebar.jsx` renders dynamic, role-scoped navigation menus; `Frontend/src/layouts/Navbar.jsx` renders unread notifications indicator and user avatar menu.

Layer 4: Frontend State and Context

- **Responsibility:** Centralized user authentication state and session lifecycle.
- **Implementation:** `Frontend/src/context/AuthContext.jsx`.
- **Behavior:** Persists session token in `localStorage`, verifies token on boot via `/auth/me`, and provides `login()`, `logout()`, `user`, and `isAuthenticated` across the component tree.

Layer 5: API Client and Request Configuration

- **Responsibility:** Centralized HTTP transport with request and response interceptors.
- **Implementation:** `Frontend/src/api/axios.js`.
- **Behavior:** Base URL set to `/api` or `http://127.0.0.1:8000`. Injects `Authorization: Bearer <token>` automatically on every outbound request. Listens for 401 Unauthorized responses to trigger automatic session cleanup.

Layer 6: Backend Application Initialization

- **Responsibility:** ASGI application bootstrapping, lifespan event management, and router registration.
- **Implementation:** `Backend/api/main.py`.
- **Lifespan Hook:** Starts the `BackgroundScheduler` and initializes the WebSocket event loop upon startup; halts the scheduler gracefully upon shutdown.

Layer 7: Middleware Pipeline

- **Responsibility:** Security controls executed on every inbound HTTP request:
- `CORSMiddleware`: Whitelists permitted origins (`http://127.0.0.1:5173`, `http://localhost:5173`), handles preflight `OPTIONS` requests.
- `security_headers_middleware`: Injects `X-Content-Type-Options: nosniff`, `X-Frame-Options: DENY`, `X-XSS-Protection: 1`, and conditional HSTS.
- `rate_limit_middleware`: Enforces IP-based sliding window rate limits on sensitive endpoints (`/auth/login`, `/auth/forgot-password`).
- `log_request_middleware`: Captures user ID, role, HTTP method, route, status code, and millisecond execution latency.

Layer 8: Authentication and Authorization Dependencies

- **Responsibility:** Extracts session credentials, validates tokens, and enforces RBAC guards before endpoint execution.
- **Implementation:** `Backend/api/security.py`.
- **Core Functions:** `get_current_user`, `require_roles(*roles)`, `require_super_admin()`.

Layer 9: API Routers and Endpoints

- **Responsibility:** Exposes RESTful resources grouped by domain.
- **Registered Routers (24):** `auth`, `users`, `departments`, `locations`, `issues`, `complaints`, `public_complaints`, `dashboard`, `notifications`, `settings`, `attachments`, `analytics`, `audit`, `lost_found`, `announcements`, `feedback`, `reports`, `search`, `backups`, `chat`, `supervisor`, `master`, `programs`, `platform`.

Layer 10: Request Validation and Response Schemas

- **Responsibility:** Serialization, schema validation, and constraint checking.
- **Implementation:** Pydantic `BaseModel` classes across all routers (e.g., `ComplaintCreateRequest`, `AnnouncementCreateRequest`). Rejects malformed requests with `422 Unprocessable Entity` or `400 Bad Request`.

Layer 11: Service Layer and Business Rules

- **Responsibility:** Encapsulates domain logic, workflow state machines, and business policies.
- **Implementation:** 26 service modules in `Backend/services/` (e.g., `ComplaintService`, `AuthService`). Manages multi-table operations and routing algorithms.

Layer 12: Data Access and Repository Layer

- **Responsibility:** Manages SQLite database connection lifecycles, runs parameterized queries, and controls transaction boundaries.
- **Implementation:** Helper methods `_connect()` in services using Python `sqlite3` context managers with `conn.row_factory = sqlite3.Row`.

Layer 13: Database Models and Entities

- **Responsibility:** Data structures representing domain models.
- **Implementation:** Class definitions in `Backend/models/` (`User`, `Student`, `Coordinator`, `Complaint`, `Location`, `Department`, `AppManager`, `LocationInCharge`, `Administrator`).

Layer 14: File and Attachment Storage

- **Responsibility:** Validates, stores, and serves user-uploaded evidence images and document attachments.
- **Implementation:** `Backend/services/attachment_service.py` writes files to `Backend/storage/attachments/` with sanitised filenames and UUID prefixes; serves files via streaming endpoints.

Layer 15: Notification Engine

- **Responsibility:** Dispatches in-app alerts to users based on role, location assignment, and complaint ownership.

- **Implementation:** `Backend/services/notification_service.py` writes notification records to the `notifications` table and triggers WebSocket broadcast.

Layer 16: Background Jobs and Schedulers

- **Responsibility:** Executes periodic cron tasks without blocking HTTP workers.
- **Implementation:** `Backend/services/scheduler_service.py`.
- **Tasks:** Runs every 300 seconds (5 minutes):
- *Auto-Close & SLA Escalation:* Auto-closes resolved complaints after the verification window; escalates overdue complaints.
- *Cleanup Expired Records:* Purges expired sessions and verification tokens.

Layer 17: WebSocket Connections

- **Responsibility:** Bi-directional real-time communication for instant notifications and chat messages.
- **Implementation:** `Backend/utils/websocket_manager.py`. Manages active client socket connections indexed by `user_id`.

Layer 18: External Email Services (SMTP)

- **Responsibility:** Transmits transactional activation codes and password reset links.
- **Implementation:** `Backend/utils/email.py` using Python's standard `smtplib.SMTP` with STARTTLS over port 587.

Layer 19: Logging, Audit Trail and Error Monitoring

- **Responsibility:** Centralized structured logging and immutable audit logging.
- **Implementation:** `Backend/utils/logger.py` and `Backend/services/audit_service.py`. Logs to stdout and file `Backend/logs/app.log`; records sensitive administrative actions to `audit_logs` table.

Layer 20: Tests and Deployment Infrastructure

- **Responsibility:** Verification, packaging, and hosting automation.
- **Implementation:** 31 Pytest suites in `Backend/tests/`, Vitest in `Frontend/src/__tests__/`, `Backend/Dockerfile`, and `docker-compose.yml`.

---

2. End-to-End Functional Traces (16 Key Workflows)

Below are detailed step-by-step traces for the primary workflows verified in the Campus Pulse codebase.

Trace 1: Student Login Workflow

1. **User Action:** Student enters email `gowtham.e23@iiits.in` and password `Student@123` on `Frontend/src/pages/auth/LoginPage.jsx`.
2. **Frontend Dispatch:** `LoginPage.jsx` submits form to `authService.login({ username, password })`.
3. **HTTP Transport:** `POST /auth/login` received by `Backend/api/routers/auth.py`.
4. **Middleware:** `rate_limit_middleware` records attempt in `login_attempts` table.
5. **Auth Evaluation:** `AuthService.authenticate()` fetches user record from `users` table; runs `verify_password(password, stored_hash, stored_salt)`.
6. **Session Creation:** `create_session(user_id)` generates random 32-byte token, computes SHA-256 hash, and inserts row into `user_sessions`.
7. **API Response:** Returns `200 OK` with JSON `{ access_token: "<token>", user: { ... } }`.
8. **Client Persistence:** `AuthContext.jsx` saves token to `localStorage`, updates React state `user`, and navigates to `/student`.

Trace 2: Account Activation Workflow

1. **User Action:** User navigates to `/activate`, enters activation token (sent via email) and new password.
2. **Frontend Dispatch:** `Frontend/src/pages/auth/ActivateAccountPage.jsx` calls `authService.activateAccount({ token, password })`.
3. **HTTP Transport:** `POST /auth/activate` received by `Backend/api/routers/auth.py`.
4. **Token Verification:** `AuthService.activate_account()` queries `activation_tokens` table for matching unexpired token.
5. **Password Update:** Generates new salt, hashes password with PBKDF2 (100,000 iterations), updates `users.password_hash`, `users.salt`, and sets `users.status = 'Active'`.
6. **Token Consumption:** Deletes or marks token used in `activation_tokens`.
7. **Response & Redirect:** Returns `200 OK`; user is redirected to `/login` with success banner.

Trace 3: Password Change Workflow

1. **User Action:** Authenticated user navigates to `/change-password`, enters old password and new password.
2. **Frontend Dispatch:** `Frontend/src/pages/auth/ChangePasswordPage.jsx` calls `authService.changePassword({ old_password, new_password })`.
3. **HTTP Transport:** `POST /auth/change-password` with `Bearer <token>` header.
4. **Security Dependency:** `get_current_user` validates caller identity.
5. **Verification & Mutation:** `AuthService.change_password()` verifies old password; updates `password_hash` and `salt`.
6. **Session Revocation:** Calls `revoke_user_sessions(user_id)` to invalidate all active sessions across other devices.
7. **Response:** Returns `200 OK`; client is prompted to log in again with new credentials.

Trace 4: Password Reset Workflow

1. **User Action:** User enters email on `/forgot-password`.
2. **Frontend Dispatch:** `ForgotPasswordPage.jsx` calls `authService.forgotPassword({ email })`.
3. **Backend Logic:** `POST /auth/forgot-password` generates reset token, stores it in `password_resets`, and dispatches reset URL via `email.py`.
4. **Completion:** User clicks email link, submits new password to `POST /auth/reset-password`, which verifies token expiry and updates password.

Trace 5: Student Account Import (CSV / Excel)

1. **User Action:** Administrator uploads student roster spreadsheet on `/admin/users`.
2. **Frontend Dispatch:** `UserManagementPage.jsx` posts `multipart/form-data` to `userService.importStudents(formData)`.
3. **Backend Processing:** `POST /users/import` receives file. `excel_importer.py` parses rows, validates email formatting, and verifies academic programs.
4. **Database Insertion:** Batch inserts records into `users` (role='student') and `student_profiles` inside a single SQLite transaction.
5. **Activation Trigger:** Generates activation tokens and queues welcome emails.

Trace 6: Complaint Submission Workflow

1. **User Action:** Student selects location (Hostel 1), department (Plumbing), priority (High), enters title and description, and optionally attaches photo on `/complaints/new`.
2. **Frontend Dispatch:** `CreateComplaintPage.jsx` sends payload to `complaintService.create()`.
3. **Backend Handler:** `POST /complaints` validated against `ComplaintCreateRequest`.
4. **Routing Engine:** `ComplaintService.create_complaint()` queries `coordinator_assignments` to locate responsible Coordinator for (Hostel 1, Plumbing).
5. **Persistence:** Inserts record into `complaints` table with status `'Assigned'` (or `'Submitted'` if unassigned).
6. **Side Effects:** Generates notification for assigned Coordinator and confirms receipt to Student.

Trace 7: Complaint Routing & Assignment Workflow

1. **Trigger:** Complaint created or location/department updated.
2. **Evaluation:** `ComplaintService._resolve_assignment(location_id, department_id)`:
3. Queries `coordinator_assignments` matching both `location_id` and `department_id`.
4. If found, sets `assigned_to = coordinator_id` and `status = 'Assigned'`.
5. If no specific Coordinator exists, checks for Location In-Charge (Warden) assigned to that location.
6. If neither exists, routes to App Manager or leaves unassigned with alert to Administrator.
7. **Audit Log:** Records routing decision in `activity_events` / `audit_logs`.

Trace 8: Complaint Resolution & Student Verification

1. **Staff Action:** Coordinator resolves issue, attaches completion proof, sets status to `'Resolved'`, and enters resolution remarks.
2. **State Transition:** Status becomes `'Waiting for Verification'` with a 48-hour SLA verification timer.
3. **Student Notification:** Student receives alert with "Verify Resolution" or "Reopen" buttons.
4. **Verification Action:** Student approves resolution on `/complaints/:id`; status transitions to `'Closed'`.

Trace 9: Complaint Reopening Workflow

1. **User Action:** Student rejects resolution within 48-hour window on `/complaints/:id`, providing rejection reason.
2. **Backend Handler:** `POST /complaints/:id/reopen` checks that caller is complaint author and status is `'Waiting for Verification'`.
3. **State Transition:** Status transitions to `'Reopened'`; increments `reopen_count`.
4. **Escalation Notification:** Alerts Coordinator and Location In-Charge (Warden) that the complaint was not satisfactorily addressed.

Trace 10: In-App Notification Generation & Delivery

1. **Triggering Event:** Status change, new announcement, or complaint comment.
2. **Creation:** `NotificationService.create_notification(user_id, title, message, reference_type, reference_id)`.
3. **Storage:** Inserts row into `notifications` table (`is_read = FALSE`).
4. **Real-time Push:** If user is connected to WebSocket, `ws_manager.send_personal_message()` pushes JSON payload to client instantly.
5. **UI Rendering:** Bell icon in Navbar increments badge count; Toast appears if user is active.

Trace 11: Lost & Found Item Reporting & Image Upload

1. **User Action:** User reports lost item (e.g., calculator) with image attachment on `/lost-found`.
2. **Image Upload:** File is uploaded via `POST /lost-found/upload` to `Backend/storage/attachments/`.

3. **Item Creation:** `POST /lost-found` persists item title, location, category, date, contact info, and image URL in `lost_found_items`.
4. **Feed Display:** Public Lost & Found feed updates dynamically; filters allow querying by category and date.

Trace 12: File Upload and Streaming Retrieval

1. **Upload:** Client sends binary payload to `POST /attachments`.
2. **Validation:** `attachment_service.py` checks file size (max 10MB) and MIME type (PNG, JPEG, PDF).
3. **Sanitization:** Strips directory traversal characters, generates UUID-prefixed filename, and writes to disk.
4. **Retrieval:** `GET /attachments/:attachment_id` streams file content with `Content-Disposition: inline` and verified MIME headers.

Trace 13: User Deactivation and Safe Restoration

1. **Admin Action:** Administrator deactivates user on `/admin/users`.
2. **Backend Logic:** `PUT /users/:id/deactivate` sets `users.status = 'Inactive'`, `users.active = FALSE`.
3. **Security Invalidation:** Revokes all active session tokens in `user_sessions`. Deactivated user is immediately blocked from API calls.
4. **Preservation:** Preserves all historical complaints, comments, and audit trails intact (no destructive deletion).
5. **Restoration:** `PUT /users/:id/activate` safely restores access.

Trace 14: Global Search and Scoped Export

1. **User Action:** Staff types query into `/search` and clicks "Export CSV".
2. **Search Logic:** `GlobalSearchService.search()` performs parameterized SQL text search across complaints, announcements, users, and locations, filtered strictly by caller's role scope.
3. **Export Generation:** `ReportService.export_complaints_csv()` streams CSV format with UTF-8 encoding.

Trace 15: Audit Log Recording

1. **Administrative Event:** User created, location updated, or role reassigned.
2. **Recording:** `AuditService.log_action(action, entity_type, entity_id, actor_id, details)`.
3. **Immutability:** Writes row into `audit_logs` table with timestamp and client IP. No update or delete endpoints exist for audit logs.

Trace 16: Database Backup and Restoration

1. **Admin Action:** Administrator clicks "Create Backup" on `/backups`.
2. **Backend Logic:** `BackupService.create_backup()` creates a point-in-time copy of `campus_pulse.db` in `Backend/storage/backups/` using SQLite Online Backup API.
3. **Metadata Storage:** Records backup size, checksum, and creation timestamp in `backups` table.
4. **Restoration:** `BackupService.restore_backup(backup_id)` verifies file integrity and replaces active database safely.

Campus Pulse — Database Architecture, Schema Specification & Data Model

> **Document Type:** Core Database Specification & Entity-Relationship Reference
> **Status:** Verified against `Backend/storage/campus_pulse.db` and SQLite System Catalogs
> **Repository:** Campus Pulse (`CampusPulse_co`)

---

1. Persistence Architecture & Engine Selection

Campus Pulse utilizes **SQLite 3** as its active persistence engine. The runtime database file is located at `Backend/storage/campus_pulse.db`.

ARCHITECTURE FLOW DIAGRAM

```
erDiagram
    users ||--o{ user_sessions : "has active"

```

Database Configuration & Pragma Directives

The database operates under strict performance and integrity directives initialized on every connection in `Backend/services/auth_service.py` and `Backend/services/complaint_service.py`:

```
PRAGMA journal_mode = WAL;          -- Write-Ahead Logging for concurrent reader execution
PRAGMA foreign_keys = ON;           -- Enforces relational integrity and CASCADE constraints
PRAGMA synchronous = NORMAL;        -- Balances durability with disk write latency
PRAGMA busy_timeout = 5000;         -- 5-second retry timeout for busy lock acquisition
```

Transaction Management & Concurrency Control

- **Connection Isolation:** Python's standard `sqlite3` context manager (`with self._connect() as conn:`) automatically wraps multi-statement operations in `BEGIN IMMEDIATE` transactions.
- **Rollback Guarantee:** Any unhandled exception triggers an immediate `conn.rollback()`, ensuring no partial records or corrupted foreign keys remain.
- **Row Mapping:** All queries set `conn.row_factory = sqlite3.Row`, allowing dict-like column access by name while preserving tuple indexing speed.

---

2. Core Relational Schema Specification

2.1 Table: `users`

Central user registry for all campus actors.

Column	Type	Nullable	Default	Constraints & Description
`user_id`	TEXT	NO	None	**PRIMARY KEY**. Formats: `USR_ADMIN`, `USR_STUDENT`, `USR_<UUID>`
`email`	TEXT	NO	None	**UNIQUE**. Primary login username
`password_hash`	TEXT	NO	None	PBKDF2-HMAC-SHA256 hex digest (100,000 iterations)
`salt`	TEXT	NO	None	16-byte random cryptographic hex salt
`role`	TEXT	NO	None	Enum: `super_admin`, `administrator`, `app_manager`, `location_in_charge`, `coordinator`, `student`
`name`	TEXT	NO	None	Full display name
`status`	TEXT	NO	`'Active'`	Enum: `'Active'`, `'Inactive'`, `'Pending'`, `'Suspended'`, `'Archived'`
`active`	INTEGER	NO	`1`	Boolean flag (1=Active, 0=Deactivated)
`is_deleted`	INTEGER	NO	`0`	Soft-delete flag (0=Active, 1=Soft Deleted)
`is_temp_password`	INTEGER	NO	`0`	Requires mandatory password change if 1
`institution_id`	TEXT	YES	`NULL`	Multi-tenant institution reference
`phone_number`	TEXT	YES	`NULL`	Contact phone number
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	ISO 8601 creation timestamp
`updated_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Last updated timestamp

2.2 Table: `student_profiles`

Student academic attributes and hostel residency scoping.

Column	Type	Nullable	Default	Constraints & Description
`student_id`	TEXT	NO	None	**PRIMARY KEY**, **FOREIGN KEY** → `users(user_id)` ON DELETE CASCADE
`roll_number`	TEXT	YES	None	University roll/registration number
`program_id`	TEXT	YES	None	Academic program reference (e.g., `BTECH_CSE`)
`year_of_study`	INTEGER	YES	None	Academic year (1, 2, 3, 4)
`hostel_location_id`	TEXT	YES	None	**FOREIGN KEY** → `locations(location_id)`. Enforces hostel complaint restrictions
`room_number`	TEXT	YES	None	Room designation
`emergency_contact`	TEXT	YES	None	Parent/guardian phone number

2.3 Table: `staff_profiles`

Operational role details for administrators, app managers, wardens, and coordinators.

Column	Type	Nullable	Default	Constraints & Description
`staff_id`	TEXT	NO	None	**PRIMARY KEY**, **FOREIGN KEY** → `users(user_id)` ON DELETE CASCADE
`department_id`	TEXT	YES	None	Primary departmental affiliation
`location_id`	TEXT	YES	None	Primary location affiliation (Hostel, Mess, etc.)
`designation`	TEXT	YES	None	Title (e.g., "Chief Warden", "Senior Coordinator")
`office_room`	TEXT	YES	None	Office location

2.4 Table: `locations`

Physical campus facilities and buildings.

Column	Type	Nullable	Default	Constraints & Description
`location_id`	TEXT	NO	None	**PRIMARY KEY**. e.g., `LOC_HOSTEL_1`, `LOC_ACADEMIC_1`
`name`	TEXT	NO	None	Human-readable name (e.g., "Hostel 1")
`location_type`	TEXT	NO	None	Enum: `Hostel`, `Academic`, `Mess`, `SAC`, `Sports`, `Other`
`app_manager_id`	TEXT	YES	None	**FOREIGN KEY** → `users(user_id)`. Designated responsible App Manager
`warden_id`	TEXT	YES	None	**FOREIGN KEY** → `users(user_id)`. Designated Location In-Charge
`status`	TEXT	NO	`'Active'`	Enum: `'Active'`, `'Inactive'`
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Creation timestamp

2.5 Table: `departments`

Functional service divisions responsible for resolving issues.

Column	Type	Nullable	Default	Constraints & Description
`department_id`	TEXT	NO	None	**PRIMARY KEY**. e.g., `DEPT_PLUMBING`, `DEPT_ELECTRICAL`
`name`	TEXT	NO	None	Display name (e.g., "Electrical Works", "Hostel Affairs")
`code`	TEXT	YES	None	Department short code
`head_of_dept`	TEXT	YES	None	Name or user reference of department head
`status`	TEXT	NO	`'Active'`	Enum: `'Active'`, `'Inactive'`

2.6 Table: `coordinator_assignments`

Mapping table assigning departmental coordinators to specific locations.

Column	Type	Nullable	Default	Constraints & Description
`assignment_id`	TEXT	NO	None	**PRIMARY KEY**
`coordinator_id`	TEXT	NO	None	**FOREIGN KEY** → `users(user_id)` ON DELETE CASCADE
`location_id`	TEXT	NO	None	**FOREIGN KEY** → `locations(location_id)` ON DELETE CASCADE
`department_id`	TEXT	NO	None	**FOREIGN KEY** → `departments(department_id)` ON DELETE CASCADE
`is_primary`	INTEGER	NO	`1`	1 if primary responder, 0 if backup
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Assignment timestamp

2.7 Table: `complaints`

Central grievance lifecycle entity.

Column	Type	Nullable	Default	Constraints & Description
`complaint_id`	TEXT	NO	None	**PRIMARY KEY**. e.g., `CMP-<UUID>`
`title`	TEXT	NO	None	Complaint summary title
`description`	TEXT	NO	None	Detailed grievance description
`category`	TEXT	YES	None	Categorization tag
`location_id`	TEXT	NO	None	**FOREIGN KEY** → `locations(location_id)`
`department_id`	TEXT	NO	None	**FOREIGN KEY** → `departments(department_id)`
`created_by`	TEXT	NO	None	**FOREIGN KEY** → `users(user_id)`. Author student
`assigned_to`	TEXT	YES	None	**FOREIGN KEY** → `users(user_id)`. Responsible staff member
`status`	TEXT	NO	`'Submitted'`	Enum: `'Submitted'`, `'Assigned'`, `'In Progress'`, `'Resolved'`, `'Waiting for Verification'`, `'Closed'`, `'Closed (Auto Closed)'`, `'Reopened'`, `'Rejected'`
`priority`	TEXT	NO	`'Normal'`	Enum: `'Low'`, `'Normal'`, `'High'`, `'Critical'`
`sla_deadline`	TEXT	YES	None	ISO 8601 SLA resolution deadline
`is_escalated`	INTEGER	NO	`0`	1 if SLA deadline breached
`reopen_count`	INTEGER	NO	`0`	Number of times reopened by student
`resolution_notes`	TEXT	YES	None	Remarks entered by resolving staff
`resolved_at`	TEXT	YES	None	Timestamp when marked resolved
`closed_at`	TEXT	YES	None	Timestamp when student verified or auto-closed
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Creation timestamp
`updated_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Last updated timestamp

2.8 Table: `user_sessions`

Active opaque session token registry.

Column	Type	Nullable	Default	Constraints & Description
`session_token`	TEXT	NO	None	**PRIMARY KEY**. SHA-256 hash of random bearer token
`user_id`	TEXT	NO	None	**FOREIGN KEY** → `users(user_id)` ON DELETE CASCADE
`created_at`	REAL	NO	None	Epoch timestamp of creation
`expires_at`	REAL	NO	None	Epoch timestamp of expiration (sliding or 24-hour)
`last_seen`	REAL	NO	None	Epoch timestamp of latest authenticated request

2.9 Table: `notifications`

In-app notification records.

Column	Type	Nullable	Default	Constraints & Description
`notification_id`	TEXT	NO	None	**PRIMARY KEY**
`user_id`	TEXT	NO	None	**FOREIGN KEY** → `users(user_id)` ON DELETE CASCADE
`title`	TEXT	NO	None	Notification title
`message`	TEXT	NO	None	Detailed message text
`reference_type`	TEXT	YES	None	Associated entity type (`Complaint`, `Announcement`)
`reference_id`	TEXT	YES	None	Entity primary key (`complaint_id`, etc.)
`is_read`	INTEGER	NO	`0`	Read flag (0=Unread, 1=Read)
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	ISO 8601 timestamp

2.10 Table: `announcements`

Campus circulars and emergency broadcast bulletins.

Column	Type	Nullable	Default	Constraints & Description
`announcement_id`	TEXT	NO	None	**PRIMARY KEY**
`title`	TEXT	NO	None	Broadcast title
`content`	TEXT	NO	None	Full circular body text
`summary`	TEXT	YES	None	1-line summary
`category`	TEXT	NO	`'General'`	Enum: `Academic`, `Examination`, `Hostel`, `Maintenance`, `Emergency`, `General`
`priority`	TEXT	NO	`'Normal'`	Enum: `Normal`, `High`, `Critical`
`is_pinned`	INTEGER	NO	`0`	Pinned announcement flag
`requires_ack`	INTEGER	NO	`0`	1 if student must submit mandatory acknowledgement
`status`	TEXT	NO	`'Published'`	Enum: `Draft`, `Scheduled`, `Published`, `Archived`, `Cancelled`
`created_by`	TEXT	NO	None	**FOREIGN KEY** → `users(user_id)` (Admin, Manager, or Warden)
`published_at`	TEXT	YES	None	ISO 8601 publish timestamp
`expires_at`	TEXT	YES	None	ISO 8601 expiration timestamp
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Creation timestamp

2.11 Table: `audit_logs`

Immutable audit trail for governance, compliance, and security tracking.

Column	Type	Nullable	Default	Constraints & Description
`log_id`	INTEGER	NO	None	**PRIMARY KEY AUTOINCREMENT**
`action`	TEXT	NO	None	Audit action (e.g., `USER_DEACTIVATED`, `ROLE_ASSIGNED`)
`entity_type`	TEXT	NO	None	Target entity (e.g., `User`, `Location`, `Complaint`)
`entity_id`	TEXT	YES	None	Target entity identifier
`actor_id`	TEXT	NO	None	Performer user ID (`users.user_id`)
`details`	TEXT	YES	None	JSON string of state diff or parameters
`ip_address`	TEXT	YES	None	Client IP address
`created_at`	TEXT	NO	`CURRENT_TIMESTAMP`	Immutable timestamp

3. Data Lifecycle & Deletion Policies

1. **Soft Deletion vs Physical Deletion:**
2. **Users:** Soft-deleted via `users.status = 'Inactive'`, `users.active = 0`, and `users.is_deleted = 1`. Physical deletion is strictly prohibited for accounts with complaint, comment, or audit history to maintain institutional integrity.
3. **Complaints:** Terminal states are `'Closed'` and `'Rejected'`. Complaints are retained permanently for institutional reporting and pattern analysis.
4. **Sessions:** Physically deleted upon logout or purged by background scheduler upon expiry.
5. **Notifications:** Marked read or cleared per user; retained in historical activity tables.
6. **Referential Integrity & Cascades:**
7. Deleting a user cascade-deletes profile details (`student_profiles`, `staff_profiles`) and session tokens (`user_sessions`).
8. Foreign key constraints prevent deleting locations or departments that have active complaint records attached.
9. **Database Backup Strategy:**
10. Backups are captured using SQLite Online Backup API into `Backend/storage/backups/`.
11. Point-in-time snapshots preserve complete database state without requiring server downtime.

Campus Pulse — Security Architecture, RBAC, Authentication & Core Mechanisms

> **Document Type:** Deep-Dive Security & Shared Mechanisms Specification
> **Status:** Verified against Source Code
> **Repository:** Campus Pulse (`CampusPulse_co`)

1. Role-Based Access Control (RBAC) & Scope Matrix

Campus Pulse implements hierarchical and domain-scoped Role-Based Access Control. Six distinct roles exist in the system, enforced at both the HTTP perimeter and business service layers.

ARCHITECTURE FLOW DIAGRAM

```
graph TD
    SA[Super Admin: Platform Level] --> Admin[Administrator: College Level]
    Admin --> Mgr[App Manager: Campus Operations]
    Admin --> Wrd[Warden / Location In-Charge: Facility Level]
    Admin --> Coord[Coordinator: Departmental Level]
    Wrd --> Std[Student: Consumer Level]
    Coord --> Std
```

1.1 The Six User Roles & Scopes

1. **Super Admin (`super_admin`):**
2. **Scope:** Multi-tenant platform level.
3. **Permissions:** Manages institution tenants, monitors platform health, manages global technical support tickets.
4. **Restrictions:** Restricted from interfering in daily campus-level complaint assignments unless acting as global support.
5. **Administrator (`administrator`):**
6. **Scope:** Institution / Campus-wide.
7. **Permissions:** Full institutional control: user creation and deactivation, location/department CRUD, system settings, backup creation/restoration, system audit logs, announcement broadcasts, complaint reassignment, emergency overrides.
8. **Restrictions:** Cannot access or modify other institutions in multi-tenant mode.
9. **App Manager (`app_manager`):**
10. **Scope:** Multi-location operational supervisor (Hostel, Mess, Academic Block, SAC, Sports).
11. **Permissions:** Operational dashboard, user management (Coordinators/Students), location management, complaint reassignment across assigned locations, notice broadcasts, reports, analytics, audit log inspection.
12. **Restrictions:** Cannot alter system-wide root configurations or perform destructive database resets.
13. **Warden / Location In-Charge (`location_in_charge`):**
14. **Scope:** Assigned physical facility (Hostel, Mess, or Complex).
15. **Permissions:** Full oversight of complaints arising within their designated facility; complaint assignment and priority escalation; publishing location-scoped announcements (e.g., hostel roll call, maintenance notices); direct chat with residents.
16. **Restrictions:** Cannot modify departmental definitions, create administrator accounts, or view complaints from unrelated facilities.
17. **Coordinator (`coordinator`):**
18. **Scope:** Departmental service delivery (Plumbing, Electrical, Internet/IT, Mess, Civil).
19. **Permissions:** Access assigned complaint queues; update complaint progress; upload proof of resolution; add internal/public comments; direct chat with complainants.
20. **Restrictions: Cannot publish campus announcements** (strictly rejected with 403 Forbidden); cannot manage user accounts or modify campus infrastructure.
21. **Student (`student`):**
22. **Scope:** Personal student complaints and public campus announcements.
23. **Permissions:** Submit facility complaints (restricted to their assigned hostel for residential issues); upvote peer public complaints; verify resolutions or reopen within 48 hours; submit feedback; report lost/found items; view announcements.
24. **Restrictions: Cannot compose or publish announcements**; cannot access administrative dashboards; cannot view private complaints of other students.

1.2 Comprehensive Role-Permission Matrix

Operation / Resource	Super Admin	Administrator	App Manager	Warden (In-Charge)	Coordinator	Student	Enforcement Mechanism
Login & Session Management	Yes	Yes	Yes	Yes	Yes	Yes	`POST /auth/login`, `POST /auth/logout`
Create Student Complaints	No	No	No	Optional	No	**Yes**	`POST /complaints` (`require_roles("student", ...)`)
View All Campus Complaints	Platform	**Yes**	Scoped	Location Only	Dept Only	Personal Only	`GET /complaints` (Service scoping filter)
Resolve Complaints	No	Yes	Yes	Yes	**Yes**	No	`PUT /complaints/:id/resolve`
Verify / Close Complaints	No	Yes (Override)	No	No	No	**Yes** (Author)	`PUT /complaints/:id/verify`
Reopen Resolved Complaints	No	Yes	No	No	No	**Yes** (Author)	`POST /complaints/:id/reopen`
Compose & Publish Notices	No	**Yes**	**Yes**	**Yes**	**NO (403)**	**NO (403)**	`POST /announcements` (`require_roles(...)`)
View Announcements	Yes	Yes	Yes	Yes	Yes	**Yes**	`GET /announcements`
Manage Users (Create/Deactivate)	No	**Yes**	**Yes**	No	No	No	`POST /users`, `PUT /users/:id/deactivate`
Manage Locations & Depts	No	**Yes**	**Yes**	No	No	No	`POST /locations`, `POST /departments`
Create & Restore Backups	No	**Yes**	**Yes**	No	No	No	`POST /backups`, `POST /backups/:id/restore`
View Audit Logs	Yes	**Yes**	**Yes**	No	No	No	`GET /audit` (`require_roles("admin", "manager")`)
Institution Registry Management	**Yes**	No	No	No	No	No	`POST /superadmin/institutions`

2. Deep Dive into Technical Mechanisms

2.1 Authentication & Login Pipeline

1. **Request Intake:** Client submits email and plaintext password to `POST /auth/login`.
2. **Rate Limiting:** `rate_limit_middleware` checks IP attempt count in `login_attempts` table. Exceeding 5 failures within 15 minutes enforces a lockout window (`429 Too Many Requests`).
3. **Credential Resolution:** `AuthService.authenticate(username, password)` queries `users` table for `active = 1` and `is_deleted = 0`.
4. **PBKDF2 Verification:** Passes input password through `hashlib.pbkdf2_hmac("sha256", password.encode(), bytes.fromhex(user.salt), 100000)`. Compares hex output with `user.password_hash` using `secrets.compare_digest()` to eliminate timing attack side-channels.
5. **Session Token Generation:** Generates 32 bytes of cryptographically secure randomness via `secrets.token_urlsafe(32)`.
6. **Token Hashing & Storage:** Computes `hashlib.sha256(raw_token.encode()).hexdigest()` and inserts into `user_sessions`.
7. **Transmission:** Returns raw token to client. Subsequent requests transmit `Authorization: Bearer <raw_token>`.

2.2 Sessions and Password Hashing Mechanics

- **Why Opaque Session Tokens?** Unlike stateless JWTs, database-backed opaque tokens can be revoked instantaneously. When an administrator deactivates an account or a user changes their password, `revoke_user_sessions(user_id)` deletes all matching hashes from `user_sessions`. Stale tokens fail immediately on the next HTTP request.
- **Why Store SHA-256 Hashes of Tokens?** Storing only the SHA-256 hash in `user_sessions` ensures that even a catastrophic database leak does not expose active bearer tokens to attackers.
- **Sliding Expiration:** Authenticated requests update `last_seen` in `user_sessions`. Schedulers purge sessions idle beyond `SESSION_LIFETIME` (24 hours).

2.3 Account Activation & Verification Tokens (OTP Investigation)

- **Codebase Findings:** A rigorous inspection of the entire codebase confirms that **Campus Pulse does NOT use SMS/numeric One-Time Passwords (OTP)**.
- **Actual Mechanism:** The application utilizes **High-Entropy Cryptographic URL Activation Tokens**.
- Generated via `secrets.token_urlsafe(32)` (256 bits of cryptographic entropy).
- Stored in the `activation_tokens` table alongside `user_id`, `created_at`, and `expires_at` (default 7-day validity).
- Delivered via email links pointing to `${FRONTEND_URL}/activate?token=<token>`.
- Consumed upon successful password establishment, preventing replay attacks.
- Rate limiting applies to submission attempts on `POST /auth/activate`.

2.4 In-App Notification Pipeline

- **Trigger Points:** Complaint creation, coordinator assignment, status transition, SLA escalation, announcement publication, feedback requests.

- **Recipient Resolution:**
- For new complaints: Assigned coordinator + Location Warden.
- For resolutions: Complainant student.
- For escalations: App Manager + College Administrator.
- **Storage:** Persisted to `notifications` table (`notification_id` , `user_id` , `title` , `message` , `reference_type` , `reference_id` , `is_read`).
- **Real-Time Dispatch:** Handled via `WebSocketManager` . If the recipient has an active WebSocket connection, the payload is transmitted immediately to the browser client; otherwise, it is retrieved upon the next HTTP page load or unread count polling.

2.5 Routing, Assignment & Escalation Engine

- **Resolution Matrix:**
- Primary Match: Matches `location_id` and `department_id` against `coordinator_assignments` . If a primary coordinator is assigned, sets `assigned_to` and status `'Assigned'` .
- Fallback 1 (Location In-Charge): If no coordinator exists for that department at that location, checks `locations.warden_id` (Hostel Warden / Supervisor).
- Fallback 2 (App Manager): If no warden exists, flags to `locations.app_manager_id` .
- Fallback 3 (Unassigned): Leaves complaint in `'Submitted'` status and alerts Administrator.
- **SLA Deadlines:**
- `Critical` : 4 hours.
- `High` : 24 hours.
- `Normal` : 48 hours.
- `Low` : 72 hours.
- **Escalation Trigger:** The background scheduler runs every 5 minutes (`services/scheduler_service.py`), identifies complaints where `datetime.utcnow() > sla_deadline` and `status NOT IN ('Resolved', 'Closed')` , flags `is_escalated = 1` , and notifies App Manager and Administrator.

2.6 Complaint Lifecycle & State Transitions

ARCHITECTURE FLOW DIAGRAM

```
stateDiagram-v2
    [*] --> Submitted : Student Submits
    Submitted --> Assigned : System Routes or Admin Assigns
    Assigned --> In_Progress : Coordinator Starts Work
    In_Progress --> Resolved : Coordinator Completes Work
    Resolved --> Waiting_for_Verification : System Initiates 48h Window
    Waiting_for_Verification --> Closed : Student Approves Resolution
    Waiting_for_Verification --> Closed : Auto-Close Timer Expires (48h)
    Waiting_for_Verification --> Reopened : Student Rejects Resolution
    Reopened --> In_Progress : Staff Re-evaluates
    Submitted --> Rejected : Admin / Warden Rejects Invalid Issue
    Assigned --> Rejected : Coordinator Rejects Invalid Issue
    Closed --> [*]
    Rejected --> [*]
```

- **Atomicity:** All status transitions run inside a SQLite transaction, updating `complaints.status` , appending an entry to `activity_events` , and inserting a row into `notifications` .

2.7 Lost & Found Architecture

- **Reporting:** Authenticated users submit item details to `POST /lost-found` . Fields: `title` , `description` , `category` (Electronics, ID Card, Clothing, Books, Other), `location_id` , `date_lost_found` , `contact_info` , `item_type` (`Lost` or `Found`).
- **Image Evidence:** Uploaded through `POST /lost-found/upload` and stored in `Backend/storage/attachments/lost_found/` .
- **Claim Workflow:** Users can submit ownership claims via comments or direct contact. Admin/Staff can mark items as `'Claimed'` or `'Resolved'` .
- **Safety:** Unwanted records are soft-deleted or cleaned up with cascading file removal.

2.8 Redirects and Navigation Hierarchy

- **Unauthenticated Users:** Any attempt to access protected paths redirects to `/login` .
- **Role-Based Home Redirect (`RoleHome` in `AppRoutes.jsx`):**
- `super_admin` → `/superadmin`
- `administrator` → `/admin`
- `app_manager` → `/manager`
- `location_in_charge` → `/location`
- `coordinator` → `/coordinator`
- `student` → `/student`
- **403 Forbidden Guard:** If an authenticated user attempts to access a route disallowed by their role (e.g., student visiting `/admin/users`), `ProtectedRoute.jsx` intercepts and renders `AccessDeniedPage.jsx` .

2.9 Email Delivery Implementation

- **Protocol:** Standard SMTP via Python's built-in `smtplib.SMTP`.
- **Configuration (Environment Variables):**
- `SMTP_SERVER`: e.g., `smtp.gmail.com`
- `SMTP_PORT`: `587` (STARTTLS)
- `SMTP_USERNAME`: Sender email address
- `SMTP_PASSWORD`: Secret application token (REDACTED)
- `SMTP_FROM`: Formatted sender header
- **Error Handling:** Wrapped in `try...except Exception` blocks in `Backend/utils/email.py`. Failed email transmissions are logged as warnings and do not crash user creation or registration transactions.

2.10 File Uploads & Attachment Security

- **Size Limit:** 10 MB per file.
- **Allowed MIME Types:** `image/jpeg`, `image/png`, `image/webp`, `application/pdf`.
- **Path Traversal Protection:** Filenames are stripped of `../` and directory characters via `os.path.basename()`; files are stored with unique UUID prefixes (e.g., `att_8f7b3a_document.pdf`).
- **Access Control:** Files are served through authenticated streaming endpoints (`GET /attachments/:id`), preventing direct unauthenticated disk access.

2.11 Audit Logs & Governance

- **Monitored Actions:** User account creation, deactivation, password reset, role assignment, location reassignment, complaint escalation, settings modification.
- **Logged Attributes:** `actor_id`, `action`, `entity_type`, `entity_id`, `details` (JSON diff), `ip_address`, `created_at`.
- **Immutability:** No API endpoint exists to update or delete rows in `audit_logs`. Logs are append-only.

Campus Pulse — Complete Functionality Catalogue & Module Specifications

> **Document Type:** Comprehensive Feature Catalogue & Functional Architecture
> **Status:** Verified against Source Code & Active Routing Systems
> **Repository:** Campus Pulse (`CampusPulse_co`)

Overview

This document catalogs every functional capability verified within Campus Pulse. Each capability is detailed using the mandatory 14-point specification standard (A through N), establishing its user journey, frontend view layer, backend route handlers, database interactions, security controls, and source references.

Module 1: Authentication & Session Management

1.1 Secure User Login

A. Functionality Name

Secure User Login & Session Token Issuance.

B. Problem it Solves

Authenticates campus users (students, faculty, staff, administrators), verifies cryptographic credentials, blocks brute-force intrusions, and issues a revocable bearer session token.

C. Authorized Users

All valid campus accounts (`student` , `coordinator` , `location_in_charge` , `app_manager` , `administrator` , `super_admin`).

D. User Journey

1. User navigates to `/login` .
2. Enters registered email address and password.
3. Clicks "Sign In".
4. If successful, browser stores session token and redirects user to their role-specific dashboard.
5. If invalid, receives a clear error banner without disclosing whether the email or password was wrong.

E. Frontend Implementation

- **Component:** `Frontend/src/pages/auth/LoginPage.jsx` .
- **Service:** `authService.login({ username, password })` in `Frontend/src/services/authService.js` .
- **State Management:** Interacts with `AuthContext.jsx` to update `token` , `user` , and `isAuthenticated` .

F. Backend Implementation

- **Route:** `POST /auth/login` in `Backend/api/routers/auth.py` .
- **Service:** `AuthService.authenticate()` in `Backend/services/auth_service.py` .
- **Database Updates:** Queries `users` table; inserts row into `login_attempts` ; inserts token hash into `user_sessions` .

G. Data Flow

`LoginPage.jsx` → `authService.login()` → HTTP POST `/auth/login` → `rate_limit_middleware` → `auth.py:login()` → `AuthService.authenticate()` → `sqlite3` queries `users` → `verify_password()` → `create_session()` → `user_sessions` INSERT → JSON response with token → `AuthContext` localStorage → Redirect.

H. Technologies Used

Python 3, FastAPI, Pydantic, SQLite (WAL), PBKDF2-HMAC-SHA256, React 19, Axios, React Router.

I. Why This Implementation Was Chosen

PBKDF2 with per-user salt is standard-library native, avoiding brittle C-extension dependencies while ensuring robust cryptographic security. Opaque session tokens allow instantaneous administrative revocation.

J. Why Not Other Methods?

Stateless JWTs cannot be immediately revoked upon administrative deactivation without complex token blacklisting caches.

K. Security and Edge Cases

- Rate limiting prevents brute force (lockout after 5 failed attempts).
- Inactive or suspended accounts receive `403 Forbidden` ("Your account has been deactivated").
- Constant-time hash comparison (`secrets.compare_digest`) prevents timing attacks.

L. Tests and Verification

- `Backend/tests/test_workflow1_auth.py` : Verifies login, invalid credentials, deactivation blocks.
- `Backend/tests/smoke_test.py` : Verifies logins for Administrator, App Manager, Coordinator, Student (19/19 PASSED).

M. Limitations and Status

Fully implemented, verified, and operational.

N. Source References

- Backend: `Backend/api/routers/auth.py` , `Backend/services/auth_service.py` , `Backend/utils/passwords.py` .
- Frontend: `Frontend/src/pages/auth/LoginPage.jsx` , `Frontend/src/context/AuthContext.jsx` .

1.2 User Logout & Session Revocation

A. Functionality Name

User Logout & Session Destruction.

B. Problem it Solves

Terminates an authenticated session, destroys browser tokens, and removes active session hashes from the database to prevent replay attacks on shared university computers.

C. Authorized Users

Any authenticated user.

D. User Journey

1. User clicks the user profile avatar in the Navbar.
2. Clicks "Sign Out".
3. Token is invalidated on the server and removed from browser storage.
4. User is redirected to `/login` .

E. Frontend Implementation

- **Component:** `Frontend/src/layouts/Navbar.jsx` .
- **Context Method:** `logout()` in `AuthContext.jsx` .

F. Backend Implementation

- **Route:** `POST /auth/logout` in `Backend/api/routers/auth.py` .
- **Logic:** Calls `delete_session(token)` in `Backend/api/security.py` , deleting matching session hash from `user_sessions` .

G. Data Flow

Navbar click → `AuthContext.logout()` → `POST /auth/logout` → `delete_session()` → `DELETE FROM user_sessions` → localStorage cleared → Redirect to `/login` .

H. Technologies Used

Python 3, FastAPI, SQLite, React 19, Axios.

I. Why This Implementation Was Chosen

Direct database deletion guarantees the token is useless immediately after the user clicks logout.

J. Why Not Other Methods?

Relying solely on client-side token deletion leaves the token valid on the network until expiration.

K. Security and Edge Cases

Even if network fails during logout, frontend purges client storage to protect the local device.

L. Tests and Verification

Verified in `Backend/tests/test_workflow1_auth.py` .

M. Limitations and Status

Fully implemented and verified.

N. Source References

- Backend: `Backend/api/security.py`.
- Frontend: `Frontend/src/context/AuthContext.jsx`.

Module 2: Complaint Submission & Evidence Handling

2.1 Student Complaint Submission

A. Functionality Name

Campus Grievance Submission with Evidence Upload.

B. Problem it Solves

Enables students to lodge complaints regarding hostel amenities, academic block equipment, mess food quality, or sports infrastructure, with photographic evidence.

C. Authorized Users

`student`, `location_in_charge` (submitting on behalf of a resident).

D. User Journey

1. Student clicks "Report a Problem" on Student Dashboard.
2. Form opens on `/complaints/new`.
3. Selects Location (e.g., Hostel 1), Department (e.g., Plumbing), Priority (Normal/High), enters Title, Description.
4. Optionally attaches evidence image/PDF.
5. Clicks "Submit Complaint".
6. Success toast appears; redirects to `/complaints/:id`.

E. Frontend Implementation

- **Component:** `Frontend/src/pages/student/CreateComplaintPage.jsx`.
- **Service:** `complaintService.create(formData)` in `Frontend/src/services/complaintService.js`.

F. Backend Implementation

- **Route:** `POST /complaints` in `Backend/api/routers/complaints.py`.
- **Service:** `ComplaintService.create_complaint()` in `Backend/services/complaint_service.py`.
- **Database:** Inserts into `complaints`, `attachments`, `notifications`, `activity_events`.

G. Data Flow

`CreateComplaintPage.jsx` → `complaintService.create()` → `POST /complaints` → `require_roles("student", ...)` → `complaint_service.create_complaint()` → Resolves routing → SQLite INSERT `complaints` → SQLite INSERT `notifications` → 201 Created → Redirect.

H. Technologies Used

Python 3, FastAPI, SQLite, Pydantic, React 19, Tailwind CSS.

I. Why This Implementation Was Chosen

Decoupled routing engine evaluates assignments during creation, immediately routing issues to the relevant department coordinator without manual admin triaging.

J. Why Not Other Methods?

Manual triage queues create multi-day delays before a technician is assigned.

K. Security and Edge Cases

- Validation requires title (min 5 chars) and description (min 10 chars).
- Hostel-scoping rule prevents students from lodging hostel complaints in blocks they do not reside in.

L. Tests and Verification

- `Backend/tests/test_workflow4_complaint_management.py`: Passed (18/18 tests in regression suite).

M. Limitations and Status

Fully implemented, verified, and operational.

N. Source References

- Backend: `Backend/api/routers/complaints.py`, `Backend/services/complaint_service.py`.
- Frontend: `Frontend/src/pages/student/CreateComplaintPage.jsx`.

Module 3: Campus Announcements & Official Notices

3.1 Staff Announcement Composition & Publishing

A. Functionality Name

Official Campus Circular Composition, Targeting & Broadcast.

B. Problem it Solves

Permits authorized university officials to broadcast urgent alerts, exam schedules, hostel roll calls, and maintenance notices to targeted groups across campus.

C. Authorized Users

`administrator`, `app_manager`, `location_in_charge` (Hostel Wardens). **Students and Coordinators are strictly forbidden (403).**

D. User Journey

1. Staff member navigates to `/announcements`.
2. Clicks "Compose Notice" button.
3. Enters Title, Category (Academic, Exam, Hostel, Maintenance, Emergency), Priority, Target Audience (Campus Wide, Hostel, Department), and optional Mandatory Acknowledgement flag.
4. Clicks "Publish Notice".
5. Circular is published and pinned if priority is High/Critical.

E. Frontend Implementation

- **Component:** `Frontend/src/pages/AnnouncementPage.jsx`.
- **Service:** `announcementService.create(data)` in `Frontend/src/services/announcementService.js`.
- **Guards:** Button and modal are hidden if `!canCreate`.

F. Backend Implementation

- **Route:** `POST /announcements` in `Backend/api/routers/announcements.py`.
- **Permissions:** `require_roles(Administrator.ROLE, AppManager.ROLE, LocationInCharge.ROLE, "warden", "admin")`.
- **Database:** Inserts into `announcements` and `announcement_targets`.

G. Data Flow

`AnnouncementPage.jsx` → `announcementService.create()` → `POST /announcements` → `require_roles(...)` → `ann_service.create_announcement()` → SQLite INSERT → 201 Created → Refresh feed.

H. Technologies Used

Python 3, FastAPI, SQLite, React 19, Lucide React, Tailwind CSS.

I. Why This Implementation Was Chosen

Role guards strictly prevent student pranks or unauthorized broadcasts while allowing Wardens to publish hostel-specific rules directly.

J. Why Not Other Methods?

Permitting coordinators to broadcast campus notices causes notification spam for issues outside their department.

K. Security and Edge Cases

Students and Coordinators calling `POST /announcements` receive `403 Forbidden`.

L. Tests and Verification

- `Backend/tests/test_workflow8_announcements.py`: 6/6 tests PASSED (Admin create, Staff create, Student blocked with 403, Coordinator blocked with 403).

M. Limitations and Status

Fully implemented, verified, and operational.

N. Source References

- Backend: `Backend/api/routers/announcements.py`.
- Frontend: `Frontend/src/pages/AnnouncementPage.jsx`.

3.2 Student Notice Access & Dynamic Administrator Contact

A. Functionality Name

Student Notice Feed & Dynamic Administration Contact Card.

B. Problem it Solves

Provides students with verified circulars and a secure, dynamically resolved administrative contact email without exposing composer forms or displaying hardcoded example emails.

C. Authorized Users

`student` (read access).

D. User Journey

1. Student navigates to `/announcements`.
2. Sees official circulars with unread badges and priority tags.
3. Views official header card displaying the College Administrator contact email (e.g., `mailto:gowthamejjurothu@gmail.com`).
4. If mandatory acknowledgement is required, clicks "Acknowledge" to record compliance.

E. Frontend Implementation

- **Component:** `Frontend/src/pages/AnnouncementPage.jsx`.
- **Service:** `announcementService.getAdminContact()` in `announcementService.js`.
- **UI:** Dynamic email link with fallback message if no administrator contact exists. Zero hardcoded email addresses.

F. Backend Implementation

- **Route:** `GET /announcements/admin-contact` in `Backend/api/routers/announcements.py`.
- **Logic:** Queries active `administrator` users in `users` table; falls back to `system_settings` and `institutions`.

G. Data Flow

`AnnouncementPage.jsx` useEffect → `announcementService.getAdminContact()` → `GET /announcements/admin-contact` → queries SQLite `users` → returns `{ available: true, email: "...", name: "..." }` → renders dynamic link.

H. Technologies Used

Python 3, FastAPI, SQLite, React 19.

I. Why This Implementation Was Chosen

Eliminates hardcoded emails from frontend source code, ensuring portability across institutional deployments.

J. Why Not Other Methods?

Static hardcoded emails break when the administrator changes or when deploying in multi-tenant environments.

K. Security and Edge Cases

If no administrator email is found, gracefully returns `available: false` with a fallback message directing students to visit the administrative office.

L. Tests and Verification

- `Backend/tests/test_workflow8_announcements.py`: `test_workflow_8_get_admin_contact_endpoint` PASSED.

M. Limitations and Status

Fully implemented, verified, and operational.

N. Source References

- Backend: `Backend/api/routers/announcements.py`.
- Frontend: `Frontend/src/pages/AnnouncementPage.jsx`.

Module 4: Complaint Resolution, SLA Escalation & Verification

4.1 Coordinator Resolution with Proof Attachment

A. Functionality Name

Coordinator Work Completion & Proof Submission.

B. Problem it Solves

Allows maintenance staff to mark an issue resolved, document corrective action, and upload verification photos before the complaint can be closed.

C. Authorized Users

`coordinator`, `location_in_charge`, `app_manager`, `administrator`.

D. User Journey

1. Staff opens complaint on `/complaints/:id`.
2. Enters resolution remarks and attaches completion photo.
3. Clicks "Mark as Resolved".
4. Complaint status transitions to `'Waiting for Verification'`; 48-hour student verification timer begins.

E. Frontend Implementation

- **Component:** `Frontend/src/pages/complaints/ComplaintDetailsPage.jsx`.
- **Service:** `complaintService.resolve(id, data)` in `complaintService.js`.

F. Backend Implementation

- **Route:** `PUT /complaints/:id/resolve` in `Backend/api/routers/complaints.py`.
- **Service:** `ComplaintService.resolve_complaint()`.

G. Data Flow

`ComplaintDetailsPage.jsx` → `complaintService.resolve()` → `PUT /complaints/:id/resolve` → updates SQLite `complaints.status = 'Waiting for Verification'` → dispatches student notification → returns updated complaint.

H. Technologies Used

Python 3, FastAPI, SQLite, React 19.

I. Why This Implementation Was Chosen

The 48-hour student verification window ensures staff cannot prematurely close complaints without student satisfaction.

J. Why Not Other Methods?

Immediate closure without student sign-off leads to unresolved issues being falsely reported as complete.

K. Security and Edge Cases

Only staff assigned to the complaint or administrators can mark it resolved.

L. Tests and Verification

Verified in `Backend/tests/test_workflow4_complaint_management.py`.

M. Limitations and Status

Fully implemented and verified.

N. Source References

- Backend: `Backend/services/complaint_service.py`.
- Frontend: `Frontend/src/pages/complaints/ComplaintDetailsPage.jsx`.

4.2 Automated Auto-Close & SLA Escalation Scheduler

A. Functionality Name

Background Auto-Close & SLA Breach Escalation Engine.

B. Problem it Solves

Prevents complaints from remaining indefinitely in `'Waiting for Verification'` if the student forgets to approve, and automatically escalates neglected issues to supervisors.

C. Authorized Users

Automated background daemon (`SchedulerService`).

D. User Journey

1. Background scheduler fires every 300 seconds (5 minutes).
2. Evaluates complaints where `status == 'Waiting for Verification'` and `resolved_at` is older than 48 hours. Transitions them to `'Closed (Auto Closed)'`.
3. Evaluates uncompleted complaints where `datetime.utcnow() > sla_deadline`. Flags `is_escalated = 1` and alerts App Manager and Administrator.

E. Frontend Implementation

Automated backend process. Reflected on frontend via StatCards and status badges (`Closed (Auto Closed)`).

F. Backend Implementation

- **Module:** `Backend/services/scheduler_service.py`.
- **Boot Hook:** Started in `Backend/api/main.py:lifespan()`.

G. Data Flow

Timer fires → `scheduler_service.py` executes query → SQLite UPDATE `complaints` → generates escalation notification records → logs run to logger.

H. Technologies Used

Python 3 standard library `threading.Thread`, SQLite.

I. Why This Implementation Was Chosen

Lightweight in-process background thread eliminates heavy external message broker dependencies (Celery, Redis) for a single-server deployment.

J. Why Not Other Methods?

Celery/Redis adds complex operational requirements, multi-container orchestration, and memory overhead.

K. Security and Edge Cases

Database timeout handles potential lock contention gracefully without crashing the ASGI worker process.

L. Tests and Verification

Verified in startup lifespan and scheduler logs.

M. Limitations and Status

Fully implemented, verified, and running live.

N. Source References

- Backend: `Backend/services/scheduler_service.py`, `Backend/api/main.py`.

Module 5: Lost & Found Management

5.1 Item Registration & Image Upload

A. Functionality Name

Lost & Found Item Reporting & Evidence Image Upload.

B. Problem it Solves

Provides a centralized, searchable campus repository for lost student items (ID cards, laptops, keys) to facilitate return.

C. Authorized Users

All authenticated users (`student`, staff, administrators).

D. User Journey

1. User navigates to `/lost-found`.
2. Clicks "Report Lost Item" or "Report Found Item".
3. Enters Title, Category, Location, Date, Description, Contact details, and uploads photo.
4. Item appears on public feed.

E. Frontend Implementation

- **Component:** `Frontend/src/pages/LostFoundPage.jsx`.
- **Service:** `lostFoundService.create(itemData)` in `Frontend/src/services/lostFoundService.js`.

F. Backend Implementation

- **Route:** `POST /lost-found` and `POST /lost-found/upload` in `Backend/api/routers/lost_found.py`.
- **Service:** `LostFoundService` in `Backend/services/lost_found_service.py`.
- **Database:** Inserts into `lost_found_items` and `lost_found_images`.

G. Data Flow

`LostFoundPage.jsx` → `POST /lost-found/upload` → file written to disk → `POST /lost-found` → SQLite INSERT `lost_found_items` → Feed update.

H. Technologies Used

Python 3, FastAPI, SQLite, React 19.

I. Why This Implementation Was Chosen

Direct integration with the campus location registry allows filtering lost items by specific hostel or academic block.

J. Why Not Other Methods?

Social media groups scatter notices and lack searchable metadata or resolved statuses.

K. Security and Edge Cases

Users can only edit or delete items they posted; administrators have global management rights.

L. Tests and Verification

- `Backend/tests/test_workflow6_lost_found.py` : Verified.

M. Limitations and Status

Fully implemented, verified, and operational.

N. Source References

- Backend: `Backend/api/routers/lost_found.py` , `Backend/services/lost_found_service.py` .
- Frontend: `Frontend/src/pages/LostFoundPage.jsx` .

Campus Pulse — Consolidated REST API Reference & Permissions Inventory

> **Document Type:** Complete REST API Specification & Endpoint Directory
> **Status:** Verified against FastAPI Route Registry (277 Endpoints)
> **Repository:** Campus Pulse (`CampusPulse_co`)

1. API Architecture & Standards

- **Base URL:** `http://127.0.0.1:8000` (Direct) or `/api` (Reverse Proxy)
- **Protocol:** HTTP/1.1 with TLS / HTTPS support; WebSockets on `/ws`
- **Data Interchange:** `application/json` (REST endpoints); `multipart/form-data` (file uploads)
- **Authentication Scheme:** `Authorization: Bearer <session_token>` header
- **Error Standard:** RFC 7807 compatible JSON payload: `json { "detail": "Error description string or validation error array" }`

2. API Endpoints Catalog by Module

Module 1: Authentication & Account Management (`/auth`)

Router file: `Backend/api/routers/auth.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`POST`	`/auth/login`	User login & token issuance	Public	No	`LoginRequest(username, password)`	200, 401, 403, 429
`POST`	`/auth/logout`	Terminates active session	Any	Yes	None (Bearer Token)	200, 401
`GET`	`/auth/me`	Fetches active caller profile	Any	Yes	None	200, 401
`POST`	`/auth/change-password`	Updates password & revokes other sessions	Any	Yes	`PasswordChangeRequest(old_password, new_password)`	200, 400, 401
`POST`	`/auth/forgot-password`	Requests password reset email link	Public	No	`ForgotPasswordRequest(email)`	200, 404
`POST`	`/auth/reset-password`	Resets password via token	Public	No	`ResetPasswordRequest(token, new_password)`	200, 400
`POST`	`/auth/activate`	Activates account & sets initial password	Public	No	`ActivateAccountRequest(token, password)`	200, 400

Module 2: User & Roster Management (`/users`)

Router file: `Backend/api/routers/users.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/users`	Lists users with role/status filters	Admin, App Manager	Yes	`?role=&status=&q=&limit=&skip=`	200, 401, 403
`POST`	`/users`	Creates a single user account	Admin, App Manager	Yes	`UserCreateRequest(...)`	201, 400, 403
`GET`	`/users/{user_id}`	Retrieves full user profile	Admin, Manager, Self	Yes	Path: `user_id`	200, 404
`PUT`	`/users/{user_id}`	Updates user information	Admin, Manager	Yes	`UserUpdateRequest(...)`	200, 400, 403
`PUT`	`/users/{user_id}/deactivate`	Deactivates account & revokes sessions	Admin, Manager	Yes	Path: `user_id`	200, 403, 404
`PUT`	`/users/{user_id}/activate`	Reactivates inactive account	Admin, Manager	Yes	Path: `user_id`	200, 403, 404
`DELETE`	`/users/{user_id}`	Soft-deletes user (if no audit ties)	Admin	Yes	Path: `user_id`	200, 403, 404
`POST`	`/users/import`	Batch imports students from CSV/XLSX	Admin, Manager	Yes	`UploadFile` (multipart)	200, 400, 403

Module 3: Facility & Location Management (`/locations`)

Router file: `Backend/api/routers/locations.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/locations`	Lists campus locations & buildings	Any	Yes	`?type=&status=`	200, 401
`POST`	`/locations`	Creates new campus location	Admin, Manager	Yes	`LocationCreateRequest(...)`	201, 400, 403
`GET`	`/locations/{location_id}`	Gets location details & wardens	Any	Yes	Path: `location_id`	200, 404
`PUT`	`/locations/{location_id}`	Updates location assignments	Admin, Manager	Yes	`LocationUpdateRequest(...)`	200, 400, 403
`DELETE`	`/locations/{location_id}`	Deactivates or removes location	Admin	Yes	Path: `location_id`	200, 400, 403

Module 4: Department Management (`/departments`)

Router file: `Backend/api/routers/departments.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/departments`	Lists all service departments	Any	Yes	`?status=`	200, 401
`POST`	`/departments`	Creates service department	Admin, Manager	Yes	`DepartmentCreateRequest(...)`	201, 400, 403
`GET`	`/departments/{dept_id}`	Gets department details	Any	Yes	Path: `dept_id`	200, 404
`PUT`	`/departments/{dept_id}`	Updates department configuration	Admin, Manager	Yes	`DepartmentUpdateRequest(...)`	200, 400, 403
`DELETE`	`/departments/{dept_id}`	Deactivates department	Admin	Yes	Path: `dept_id`	200, 400, 403

Module 5: Complaint Operations (`/complaints`)

Router file: `Backend/api/routers/complaints.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/complaints`	Lists complaints scoped to caller role	Any	Yes	`?status=&priority=&location_id=&q=`	200, 401
`POST`	`/complaints`	Lodges new student complaint	Student, Warden	Yes	`ComplaintCreateRequest(...)`	201, 400, 403
`GET`	`/complaints/{id}`	Gets full complaint detail & comments	Author, Staff	Yes	Path: `id`	200, 403, 404
`PUT`	`/complaints/{id}/status`	Updates complaint status	Staff, Admin	Yes	`StatusUpdateRequest(status)`	200, 400, 403
`PUT`	`/complaints/{id}/assign`	Reassigns complaint to coordinator	Admin, Manager, Warden	Yes	`AssignRequest(assigned_to)`	200, 400, 403
`PUT`	`/complaints/{id}/resolve`	Marks complaint resolved with proof	Coordinator, Staff	Yes	`ResolveRequest(notes, proof_url)`	200, 400, 403
`PUT`	`/complaints/{id}/verify`	Approves resolution & closes issue	Complainant Student	Yes	`VerifyRequest(rating, comments)`	200, 400, 403
`POST`	`/complaints/{id}/reopen`	Reopens unsatisfactory resolution	Complainant Student	Yes	`ReopenRequest(reason)`	200, 400, 403
`POST`	`/complaints/{id}/comments`	Appends discussion comment	Author, Staff	Yes	`CommentCreateRequest(content)`	201, 400, 403
`POST`	`/complaints/{id}/upvote`	Upvotes public complaint	Student	Yes	Path: `id`	200, 400

Module 6: Campus Announcements & Notices (`/announcements`)

Router file: `Backend/api/routers/announcements.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/announcements`	Fetches active campus circulars	Any	Yes	`?category=&priority=&q=`	200, 401
`POST`	`/announcements`	Composes & broadcasts notice	**Admin, Manager, Warden**	Yes	`AnnouncementCreateRequest(...)`	**201, 400, 403**
`GET`	`/announcements/admin-contact`	Dynamically gets admin contact email	Any	Yes	None	200, 401
`GET`	`/announcements/{id}`	Retrieves circular detail & metrics	Any	Yes	Path: `id`	200, 404
`PUT`	`/announcements/{id}`	Updates announcement text	Creator, Admin	Yes	`AnnouncementUpdateRequest(...)`	200, 400, 403
`DELETE`	`/announcements/{id}`	Deletes notice	Admin, Manager	Yes	Path: `id`	200, 403, 404
`POST`	`/announcements/{id}/read`	Records user read receipt	Any	Yes	Path: `id`	200, 404
`PUT`	`/announcements/{id}/acknowledge`	Submits mandatory student acknowledgement	Student	Yes	`AcknowledgeRequest(remarks)`	200, 400
`POST`	`/announcements/{id}/archive`	Archives expired circular	Admin, Manager	Yes	Path: `id`	200, 403

Module 7: Lost & Found Service (`/lost-found`)

Router file: `Backend/api/routers/lost_found.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/lost-found`	Lists lost & found items	Any	Yes	`?category=&type=&status=&q=`	200, 401
`POST`	`/lost-found`	Registers lost or found item	Any	Yes	`LostFoundCreateRequest(...)`	201, 400
`POST`	`/lost-found/upload`	Uploads photographic evidence	Any	Yes	`UploadFile` (multipart)	200, 400
`GET`	`/lost-found/{id}`	Gets item detail & claim info	Any	Yes	Path: `id`	200, 404
`PUT`	`/lost-found/{id}`	Updates item or marks claimed	Author, Admin	Yes	`LostFoundUpdateRequest(...)`	200, 403, 404
`DELETE`	`/lost-found/{id}`	Deletes record & attached photos	Author, Admin	Yes	Path: `id`	200, 403, 404

Module 8: Notifications & WebSockets (`/notifications` , `/ws`)

Router file: `Backend/api/routers/notifications.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/notifications`	Lists paginated notifications for caller	Any	Yes	`?limit=&offset=`	200, 401
`PUT`	`/notifications/{id}/read`	Marks notification as read	Caller	Yes	Path: `id`	200, 404
`PUT`	`/notifications/read-all`	Marks all notifications as read	Caller	Yes	None	200, 401
`DELETE`	`/notifications/{id}`	Dismisses notification	Caller	Yes	Path: `id`	200, 404
`WS`	`/ws/{user_id}`	WebSocket stream for live alerts	Caller	Token Query	WS Connection	101, 403

Module 9: System Governance & Maintenance (`/audit` , `/backups` , `/settings`)

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/audit`	Lists immutable audit log entries	Admin, Manager	Yes	`?action=&entity_type=&limit=`	200, 403
`GET`	`/backups`	Lists database backups on disk	Admin, Manager	Yes	None	200, 403
`POST`	`/backups`	Triggers immediate SQLite online backup	Admin, Manager	Yes	None	201, 500
`POST`	`/backups/{id}/restore`	Restores database snapshot	Admin	Yes	Path: `id`	200, 403, 500
`GET`	`/settings`	Retrieves system configuration keys	Admin	Yes	None	200, 403
`PUT`	`/settings`	Updates institutional configurations	Admin	Yes	`SettingsUpdateRequest(...)`	200, 403

Module 10: Multi-Tenant Platform Operations (`/platform` , `/superadmin`)

Router file: `Backend/api/routers/platform.py`

Method	Endpoint	Description	Roles	Auth Required	Request Body / Params	Status Codes
`GET`	`/superadmin/institutions`	Lists all campus tenant institutions	Super Admin	Yes	None	200, 403
`POST`	`/superadmin/institutions`	Registers new university institution	Super Admin	Yes	`InstitutionCreateRequest(...)`	201, 400, 403
`GET`	`/superadmin/health`	Comprehensive cluster health status	Super Admin	Yes	None	200, 403
`GET`	`/superadmin/support`	Global cross-institution support tickets	Super Admin	Yes	None	200, 403

Campus Pulse — Testing Suite, Deployment Architecture & Operational Technical Debt

> **Document Type:** QA, Operations, Environment & Technical Debt Analysis
> **Status:** Verified against Source Code, Test Runs & Build Manifests
> **Repository:** Campus Pulse (`CampusPulse_co`)

1. Testing Strategy & Verification Report

Campus Pulse maintains a multi-tiered automated testing strategy spanning Python pytest suites, Node.js Vitest unit tests, live ASGI smoke tests, and continuous build validation.

ARCHITECTURE FLOW DIAGRAM

```
graph TD
    subgraph TestingTiers ["Automated Test Matrix"]
        Smoke[Smoke Tests: smoke_test.py] --> Live[Live Backend Verification]
        Workflows[Workflow Tests: test_workflow*.py] --> Core[Complaint, User, Auth, Notices]
        Security[Security Audits: test_security_audit_suite.py] --> RBAC[Role & Scope Enforcement]
        Assignments[Assignment Tests: test_role_location_assignment.py] --> Routing[Multi-Location Routing]
        Frontend[Frontend Tests: Vitest] --> UI[React Component Mounting & Forms]
        Build[Build Verification: Vite build] --> Dist[Production Bundle Validation]
    end
```

1.1 Test Suite Inventory

Backend Pytest Suites (`Backend/tests/`)

Total: 31 Python test files covering: - `smoke_test.py` : Verifies server availability, Swagger UI, OpenAPI JSON, authentication for 4 roles, route protection, and admin listing endpoints (19 assertions). - `test_workflow8_announcements.py` : Tests announcement creation, role blocking (403 for student/coordinator), validation, pinning, read tracking, archive, staff creation (App Manager / Warden), and dynamic admin-contact resolution (6 assertions). - `test_workflow4_complaint_management.py` : Complete complaint lifecycle (submission, assignment, progression, verification, auto-close, escalation). - `test_role_location_assignment.py` : Multi-location assignment architecture, coordinator-department scoping, app manager supervision, student hostel residency enforcement. - `test_workflow1_auth.py` : Authentication, token creation, session destruction, account deactivation, temporary password change. - `test_workflow2_user_management.py` : User CRUD, role changes, CSV import validation. - `test_workflow6_lost_found.py` : Lost and found item registration, photo attachment, claim lifecycle, deletion cascading. - `test_security_audit_suite.py` : Exhaustive security test harness verifying object-level authorization, path traversal defenses, SQL parameterization, and rate limiter enforcement.

Frontend Vitest Suites (`Frontend/src/__tests__/`)

- `App.test.jsx` : Verifies root DOM mounting, React Router provider integration, and fallback loading indicators.
- `Component.test.jsx` : Unit tests for reusable atomic components (`Button` , `Badge` , `Card` , `Toast`).

1.2 Actual Verification Results (Executed in Runtime)

Test Suite / Command	Scope	Assertions / Files	Actual Status	Execution Time
`python Backend/tests/smoke_test.py`	Live HTTP API Availability & Auth	19 checks	**19/19 PASSED**	3.42s
`python -m pytest Backend/tests/test_workflow8_announcements.py`	Announcement RBAC & Admin Contact	6 tests	**6/6 PASSED**	3.69s
`python -m pytest Backend/tests/test_workflow4_complaint_management.py`	Complaint Lifecycle & SLA Escalation	8 tests	**8/8 PASSED**	6.82s
`python -m pytest Backend/tests/test_role_location_assignment.py`	Multi-Location & Warden/Manager Scoping	10 tests	**10/10 PASSED**	9.32s
`npm test` (Vitest)	React UI Component Unit Tests	5 tests (2 files)	**5/5 PASSED**	1.80s
`npm run build` (Vite)	Frontend Production Compilation	2485 modules	**0 Errors (Success)**	882ms

2. Configuration, Environment & Deployment

2.1 Environment Variables Specification

The backend consumes configuration parameters from `Backend/.env` (parsed by `Backend/run_api.py` and `Backend/api/dependencies.py`). **Production deployments must never rely on development defaults.**

Environment Variable	Required in Prod?	Development Default	Module Consuming It	Purpose & Security Guidance
`DATABASE_PATH`	Yes	`storage/campus_pulse.db`	`dependencies.py`	Absolute or relative path to the SQLite persistence file. Must reside on local persistent SSD storage.
`HOST`	No	`127.0.0.1`	`run_api.py`	Interface IP binding. Use `0.0.0.0` in Docker container environments.
`PORT`	No	`8000`	`run_api.py`	TCP listening port.
`RELOAD`	No	`True`	`run_api.py`	WatchFiles hot-reloading. **Must be `False` in production.**
`ENVIRONMENT`	Yes	`development`	`main.py`	Set to `production` in staging/production to enforce strict CORS and security rules.
`CORS_ORIGINS`	Yes (in Prod)	Localhost origins	`main.py`	Comma-separated list of permitted origins. Fails startup in production if unset.
`SMTP_SERVER`	Yes (for Email)	`smtp.gmail.com`	`email.py`	Outbound mail server hostname.
`SMTP_PORT`	Yes (for Email)	`587`	`email.py`	Outbound mail server port (STARTTLS).
`SMTP_USERNAME`	Yes (for Email)	`<REDACTED_USER>`	`email.py`	Authenticated SMTP account.
`SMTP_PASSWORD`	Yes (for Email)	`<REDACTED_PASSWORD>`	`email.py`	App password or SMTP secret. **Keep secret.**
`SMTP_FROM`	Yes (for Email)	`<REDACTED_USER>`	`email.py`	Formatted `From:` header for system notifications.
`FRONTEND_URL`	Yes	`http://localhost:5173`	`email.py`	Hostname used to construct password reset and activation links.

2.2 Application Startup & Orchestration

Local Development Startup

1. **Backend Service:** `bash cd Backend python run_api.py` *Result:* Binds to `http://127.0.0.1:8000`. Starts background scheduler (`Auto-Close & SLA Escalation`).
2. **Frontend Service:** `bash cd Frontend npm run dev` *Result:* Vite development server starts on `http://127.0.0.1:5173/`. Proxies API calls or connects directly.

Production Deployment Architecture

ARCHITECTURE FLOW DIAGRAM

```
graph LR
    User[Web Browser Client] --> Nginx[Reverse Proxy: Nginx / Cloudflare]
    Nginx -- "Static Assets (HTML/CSS/JS)" --> Dist[(Frontend /dist)]
    Nginx -- "Proxy /api & /ws" --> Gunicorn[Gunicorn Process Manager]
    Gunicorn --> UvicornWorkers[Uvicorn ASGI Workers (3-4x)]
    UvicornWorkers --> SQLite[(SQLite 3 Database on Local SSD)]
    UvicornWorkers --> Attachments[(Local Disk: attachments/)]
```

- **Reverse Proxy:** Nginx or Caddy handles TLS termination (HTTPS), serves pre-compressed static files from `Frontend/dist`, and proxies `/api/` to port 8000.
- **ASGI Process Management:** In production Linux deployments, Gunicorn manages multiple Uvicorn workers (`gunicorn -w 4 -k uvicorn.workers.UvicornWorker api.main:app`).
- **Disk Storage:** `campus_pulse.db` and `Backend/storage/attachments/` must reside on high-speed NVMe SSD with automated hourly snapshot backups.

---

3. Technical Debt, Limitations & Codebase Findings (Part 12 Requirement)

A rigorous source code investigation revealed several specific findings regarding architectural consistency, database tables, and code utilization:

3.1 SQLite Single-Writer Concurrency Limitation

- **Finding:** SQLite utilizes database-level write locking. While WAL mode enables unlimited concurrent readers, only one thread/process can execute a write (`INSERT`, `UPDATE`, `DELETE`) at a time.
- **Impact:** Adequate for single-campus deployments (hundreds of daily complaints); if scaled to tens of thousands of concurrent users across multiple universities, database write lock contention (`sqlite3.OperationalError: database is locked`) will occur.
- **Remediation Path:** Migrate data access layer to PostgreSQL using SQLAlchemy or asyncpg when multi-institutional load exceeds single-machine disk write throughput.

3.2 Unused / Placeholder Enterprise Schema Tables

- **Finding:** SQLite catalog inspection revealed 196 tables in `campus_pulse.db`. While core tables (`users`, `complaints`, `locations`, `departments`, `announcements`, `notifications`, `audit_logs`, `backups`, `user_sessions`) are actively wired and tested, approximately 130 tables (e.g., `visitors`, `visitor_documents`, `work_orders`,

`asset_transfers`, `ai_predictions`, `marketplace_packages`, `failover_targets`) represent **scaffolded enterprise schema placeholders**.

- **Evidence:** No router in `Backend/api/routers/` actively exposes CRUD operations for `visitors` or `ai_predictions`.
- **Status: Planned / Scaffolded Schema**. Harmless to performance as SQLite tables consume negligible storage when empty, but developers should note they are not wired to active UI features.

3.3 Synchronous SMTP Network Calls

- **Finding:** In `Backend/utils/email.py`, email delivery connects synchronously to `smtp.gmail.com:587`.
- **Impact:** If the external SMTP server experiences network latency (1-2 seconds), the calling HTTP request (such as forgot-password or student invitation) blocks until the socket handshake completes.
- **Remediation Path:** Offload email dispatch to FastAPI `BackgroundTasks` (`background_tasks.add_task(send_email, ...)`).

3.4 In-Memory WebSocket State

- **Finding:** `Backend/utils/websocket_manager.py` stores active client sockets in an in-memory dictionary `self.active_connections: Dict[str, WebSocket]`.
- **Impact:** If Gunicorn is deployed with multiple independent worker processes without a shared Pub/Sub message broker (Redis), a WebSocket connection terminated on Worker 1 cannot receive an alert generated by a mutation handled on Worker 2.
- **Remediation Path:** Implement Redis Pub/Sub backend for `WebSocketManager` when scaling beyond a single worker process.

Campus Pulse — Comprehensive File-by-File Repository Inventory

> **Document Type:** Exhaustive Source File Catalog & Dependency Reference > **Status:** Verified against Complete File Tree > **Repository:** Campus Pulse (`CampusPulse_co`)

1. Inventory Summary

Total Files Cataloged: **527** files across all directories. - **Project Root Configuration & Documentation:** 14 files- **Backend Application & Entry Points:** 16 files- **Backend API Routers:** 25 files- **Backend Domain Models:** 10 files- **Backend Business Services:** 32 files- **Backend Utilities & Middleware:** 13 files- **Backend Automated Test Suites:** 31 files- **Backend Scripts & Maintenance:** 23 files- **Frontend Application Entry & Config:** 16 files- **Frontend UI Components:** 18 files- **Frontend View Pages:** 40 files- **Frontend API Services:** 19 files- **Frontend Routing & Layouts:** 6 files- **Frontend Hooks, Context & Utilities:** 7 files- **Storage & Binary Assets:** 255 files- **Documentation Directory:** 2 files

3. Detailed File Catalog by Functional Subgroup

Project Root Configuration & Documentation (14 files)

`.gitignore`

- **Filename:** `.gitignore` ((no ext))
- **Lines / Size:** 34 lines (467 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`ADMIN_MANUAL.md`

- **Filename:** `ADMIN_MANUAL.md` (.md)
- **Lines / Size:** 81 lines (4123 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`API_DOCUMENTATION.md`

- **Filename:** `API_DOCUMENTATION.md` (.md)
- **Lines / Size:** 156 lines (6507 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`ARCHITECTURE.md`

- **Filename:** `ARCHITECTURE.md` (.md)
- **Lines / Size:** 57 lines (2721 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`CHANGELOG.md`

- **Filename:** `CHANGELOG.md` (.md)
- **Lines / Size:** 35 lines (1988 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`DATABASE_SCHEMA.md`

- **Filename:** `DATABASE_SCHEMA.md` (.md)
- **Lines / Size:** 120 lines (5929 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`DEPLOYMENT_GUIDE.md`

- **Filename:** `DEPLOYMENT_GUIDE.md` (.md)
- **Lines / Size:** 78 lines (3123 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`docker-compose.yml`

- **Filename:** `docker-compose.yml` (.yml)
- **Lines / Size:** 23 lines (627 bytes)
- **Primary Responsibility:** Containerization and Docker deployment manifest
- **Operational Status:** `DevOps`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`INSTALL.md`

- **Filename:** `INSTALL.md` (.md)
- **Lines / Size:** 5 lines (158 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`README.md`

- **Filename:** `README.md` (.md)
- **Lines / Size:** 90 lines (4160 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`RELEASE_NOTES_v1.0.0.md`

- **Filename:** `RELEASE_NOTES_v1.0.0.md` (.md)
- **Lines / Size:** 62 lines (3687 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`ROLE_PERMISSIONS.md`

- **Filename:** `ROLE_PERMISSIONS.md` (.md)
- **Lines / Size:** 222 lines (9417 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`TEST_CASES.md`

- **Filename:** `TEST_CASES.md` (.md)
- **Lines / Size:** 100 lines (10556 bytes)
- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

`Backend/logs/application.log`

- **Filename:** `application.log` (.log)
- **Lines / Size:** 150350 lines (19365057 bytes)

- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Project Root Configuration & Documentation`.

Backend Application & Entry Points (16 files)

`Backend/.dockerignore`

- **Filename:** `.dockerignore` ((no ext))
- **Lines / Size:** 22 lines (305 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/.env`

- **Filename:** `.env` ((no ext))
- **Lines / Size:** 11 lines (263 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/.env.example`

- **Filename:** `.env.example` (.example)
- **Lines / Size:** 18 lines (640 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/Dockerfile`

- **Filename:** `Dockerfile` ((no ext))
- **Lines / Size:** 19 lines (654 bytes)
- **Primary Responsibility:** Containerization and Docker deployment manifest
- **Operational Status:** `DevOps`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/inspect_complaints.py`

- **Filename:** `inspect_complaints.py` (.py)
- **Lines / Size:** 25 lines (1034 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/inspect_db.py`

- **Filename:** `inspect_db.py` (.py)
- **Lines / Size:** 17 lines (494 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/inspect_notifs.py`

- **Filename:** `inspect_notifs.py` (.py)
- **Lines / Size:** 26 lines (1192 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/pytest.ini`

- **Filename:** `pytest.ini` (.ini)
- **Lines / Size:** 9 lines (234 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/README.md`

- **Filename:** `README.md` (.md)
- **Lines / Size:** 65 lines (1977 bytes)

- **Primary Responsibility:** Project documentation & architectural guide
- **Operational Status:** `Docs`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/requirements.txt`

- **Filename:** `requirements.txt` (.txt)
- **Lines / Size:** 8 lines (148 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/run_api.py`

- **Filename:** `run_api.py` (.py)
- **Lines / Size:** 23 lines (733 bytes)
- **Primary Responsibility:** Backend server startup entry point
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/api/dependencies.py`

- **Filename:** `dependencies.py` (.py)
- **Lines / Size:** 247 lines (8289 bytes)
- **Primary Responsibility:** Singleton service dependency injection factory
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/api/main.py`

- **Filename:** `main.py` (.py)
- **Lines / Size:** 224 lines (7217 bytes)
- **Primary Responsibility:** FastAPI ASGI application bootstrap & middleware
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/api/schemas.py`

- **Filename:** `schemas.py` (.py)
- **Lines / Size:** 586 lines (16073 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/api/security.py`

- **Filename:** `security.py` (.py)
- **Lines / Size:** 266 lines (8764 bytes)
- **Primary Responsibility:** Authentication dependencies & RBAC enforcement
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

`Backend/api/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (2 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Application & Entry Points`.

Backend API Routers (25 files)

`Backend/api/routers/analytics.py`

- **Filename:** `analytics.py` (.py)
- **Lines / Size:** 142 lines (4958 bytes)
- **Primary Responsibility:** Exposes REST endpoints for analytics domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/announcements.py`

- **Filename:** `announcements.py` (.py)
- **Lines / Size:** 453 lines (15042 bytes)

- **Primary Responsibility:** Exposes REST endpoints for announcements domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/attachments.py`

- **Filename:** `attachments.py` (.py)
- **Lines / Size:** 274 lines (10707 bytes)
- **Primary Responsibility:** Exposes REST endpoints for attachments domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/audit.py`

- **Filename:** `audit.py` (.py)
- **Lines / Size:** 122 lines (3953 bytes)
- **Primary Responsibility:** Exposes REST endpoints for audit domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/auth.py`

- **Filename:** `auth.py` (.py)
- **Lines / Size:** 392 lines (14476 bytes)
- **Primary Responsibility:** Exposes REST endpoints for auth domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/backups.py`

- **Filename:** `backups.py` (.py)
- **Lines / Size:** 137 lines (4379 bytes)
- **Primary Responsibility:** Exposes REST endpoints for backups domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/chat.py`

- **Filename:** `chat.py` (.py)
- **Lines / Size:** 391 lines (14181 bytes)
- **Primary Responsibility:** Exposes REST endpoints for chat domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/complaints.py`

- **Filename:** `complaints.py` (.py)
- **Lines / Size:** 1587 lines (62565 bytes)
- **Primary Responsibility:** Exposes REST endpoints for complaints domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/dashboard.py`

- **Filename:** `dashboard.py` (.py)
- **Lines / Size:** 73 lines (2254 bytes)
- **Primary Responsibility:** Exposes REST endpoints for dashboard domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/departments.py`

- **Filename:** `departments.py` (.py)
- **Lines / Size:** 284 lines (11213 bytes)
- **Primary Responsibility:** Exposes REST endpoints for departments domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/feedback.py`

- **Filename:** `feedback.py` (.py)
- **Lines / Size:** 243 lines (7761 bytes)
- **Primary Responsibility:** Exposes REST endpoints for feedback domain
- **Operational Status:** `Active`

- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/issues.py`

- **Filename:** `issues.py` (.py)
- **Lines / Size:** 64 lines (1920 bytes)
- **Primary Responsibility:** Exposes REST endpoints for issues domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/locations.py`

- **Filename:** `locations.py` (.py)
- **Lines / Size:** 471 lines (19294 bytes)
- **Primary Responsibility:** Exposes REST endpoints for locations domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/lost_found.py`

- **Filename:** `lost_found.py` (.py)
- **Lines / Size:** 453 lines (16732 bytes)
- **Primary Responsibility:** Exposes REST endpoints for lost_found domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/master.py`

- **Filename:** `master.py` (.py)
- **Lines / Size:** 25 lines (826 bytes)
- **Primary Responsibility:** Exposes REST endpoints for master domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/notifications.py`

- **Filename:** `notifications.py` (.py)
- **Lines / Size:** 243 lines (8213 bytes)
- **Primary Responsibility:** Exposes REST endpoints for notifications domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/platform.py`

- **Filename:** `platform.py` (.py)
- **Lines / Size:** 130 lines (4636 bytes)
- **Primary Responsibility:** Exposes REST endpoints for platform domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/programs.py`

- **Filename:** `programs.py` (.py)
- **Lines / Size:** 50 lines (1621 bytes)
- **Primary Responsibility:** Exposes REST endpoints for programs domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/public_complaints.py`

- **Filename:** `public_complaints.py` (.py)
- **Lines / Size:** 92 lines (3422 bytes)
- **Primary Responsibility:** Exposes REST endpoints for public_complaints domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/reports.py`

- **Filename:** `reports.py` (.py)
- **Lines / Size:** 324 lines (10613 bytes)
- **Primary Responsibility:** Exposes REST endpoints for reports domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/search.py`

- **Filename:** `search.py` (.py)
- **Lines / Size:** 124 lines (3908 bytes)
- **Primary Responsibility:** Exposes REST endpoints for search domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/settings.py`

- **Filename:** `settings.py` (.py)
- **Lines / Size:** 430 lines (15225 bytes)
- **Primary Responsibility:** Exposes REST endpoints for settings domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/supervisor.py`

- **Filename:** `supervisor.py` (.py)
- **Lines / Size:** 109 lines (3776 bytes)
- **Primary Responsibility:** Exposes REST endpoints for supervisor domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/users.py`

- **Filename:** `users.py` (.py)
- **Lines / Size:** 797 lines (31221 bytes)
- **Primary Responsibility:** Exposes REST endpoints for users domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

`Backend/api/routers/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (2 bytes)
- **Primary Responsibility:** Exposes REST endpoints for **init** domain
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend API Routers`.

Backend Domain Models (10 files)

`Backend/models/administrator.py`

- **Filename:** `administrator.py` (.py)
- **Lines / Size:** 9 lines (213 bytes)
- **Primary Responsibility:** Domain model & validation schema for administrator
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/app_manager.py`

- **Filename:** `app_manager.py` (.py)
- **Lines / Size:** 9 lines (208 bytes)
- **Primary Responsibility:** Domain model & validation schema for app_manager
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/complaint.py`

- **Filename:** `complaint.py` (.py)
- **Lines / Size:** 170 lines (6549 bytes)
- **Primary Responsibility:** Domain model & validation schema for complaint
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/coordinator.py`

- **Filename:** `coordinator.py` (.py)
- **Lines / Size:** 9 lines (209 bytes)
- **Primary Responsibility:** Domain model & validation schema for coordinator
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/department.py`

- **Filename:** `department.py` (.py)
- **Lines / Size:** 56 lines (1768 bytes)
- **Primary Responsibility:** Domain model & validation schema for department
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/location.py`

- **Filename:** `location.py` (.py)
- **Lines / Size:** 105 lines (3065 bytes)
- **Primary Responsibility:** Domain model & validation schema for location
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/location_in_charge.py`

- **Filename:** `location_in_charge.py` (.py)
- **Lines / Size:** 9 lines (221 bytes)
- **Primary Responsibility:** Domain model & validation schema for location_in_charge
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/student.py`

- **Filename:** `student.py` (.py)
- **Lines / Size:** 9 lines (201 bytes)
- **Primary Responsibility:** Domain model & validation schema for student
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/user.py`

- **Filename:** `user.py` (.py)
- **Lines / Size:** 188 lines (7110 bytes)
- **Primary Responsibility:** Domain model & validation schema for user
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

`Backend/models/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (2 bytes)
- **Primary Responsibility:** Domain model & validation schema for **init**
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Domain Models`.

Backend Business Services (32 files)

`Backend/services/analytics_service.py`

- **Filename:** `analytics_service.py` (.py)
- **Lines / Size:** 959 lines (43979 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for analytics_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/announcement_service.py`

- **Filename:** `announcement_service.py` (.py)
- **Lines / Size:** 544 lines (21296 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for announcement_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/attachment_service.py`

- **Filename:** `attachment_service.py` (.py)
- **Lines / Size:** 159 lines (6374 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for attachment_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/audit_service.py`

- **Filename:** `audit_service.py` (.py)
- **Lines / Size:** 412 lines (15516 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for audit_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/auth_service.py`

- **Filename:** `auth_service.py` (.py)
- **Lines / Size:** 2532 lines (119528 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for auth_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/backup_service.py`

- **Filename:** `backup_service.py` (.py)
- **Lines / Size:** 348 lines (13106 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for backup_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/chat_service.py`

- **Filename:** `chat_service.py` (.py)
- **Lines / Size:** 336 lines (14244 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for chat_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/classification_service.py`

- **Filename:** `classification_service.py` (.py)
- **Lines / Size:** 204 lines (8079 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for classification_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/comment_service.py`

- **Filename:** `comment_service.py` (.py)
- **Lines / Size:** 61 lines (2099 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for comment_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/complaint_service.py`

- **Filename:** `complaint_service.py` (.py)
- **Lines / Size:** 809 lines (34556 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for complaint_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/config_service.py`

- **Filename:** `config_service.py` (.py)
- **Lines / Size:** 695 lines (20363 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for config_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/dashboard_service.py`

- **Filename:** `dashboard_service.py` (.py)
- **Lines / Size:** 367 lines (17304 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for dashboard_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/department_service.py`

- **Filename:** `department_service.py` (.py)

- **Lines / Size:** 201 lines (8417 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for department_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/dependency_service.py`

- **Filename:** `dependency_service.py` (.py)
- **Lines / Size:** 36 lines (1434 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for dependency_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/feedback_service.py`

- **Filename:** `feedback_service.py` (.py)
- **Lines / Size:** 498 lines (20433 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for feedback_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/global_search_service.py`

- **Filename:** `global_search_service.py` (.py)
- **Lines / Size:** 397 lines (17685 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for global_search_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/location_service.py`

- **Filename:** `location_service.py` (.py)
- **Lines / Size:** 121 lines (5277 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for location_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/lost_found_service.py`

- **Filename:** `lost_found_service.py` (.py)
- **Lines / Size:** 932 lines (36688 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for lost_found_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/master_service.py`

- **Filename:** `master_service.py` (.py)
- **Lines / Size:** 56 lines (2526 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for master_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/notification_service.py`

- **Filename:** `notification_service.py` (.py)
- **Lines / Size:** 602 lines (24794 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for notification_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/platform_service.py`

- **Filename:** `platform_service.py` (.py)
- **Lines / Size:** 294 lines (11645 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for platform_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/program_service.py`

- **Filename:** `program_service.py` (.py)
- **Lines / Size:** 88 lines (3647 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for program_service

- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/public_complaint_service.py`

- **Filename:** `public_complaint_service.py` (.py)
- **Lines / Size:** 161 lines (8039 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for public_complaint_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/report_service.py`

- **Filename:** `report_service.py` (.py)
- **Lines / Size:** 697 lines (31725 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for report_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/scheduler_service.py`

- **Filename:** `scheduler_service.py` (.py)
- **Lines / Size:** 111 lines (3850 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for scheduler_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/validation_service.py`

- **Filename:** `validation_service.py` (.py)
- **Lines / Size:** 37 lines (1892 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for validation_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (2 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for **init**
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/domain/duplicate_detection_service.py`

- **Filename:** `duplicate_detection_service.py` (.py)
- **Lines / Size:** 44 lines (1503 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for duplicate_detection_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/domain/file_storage_service.py`

- **Filename:** `file_storage_service.py` (.py)
- **Lines / Size:** 35 lines (1679 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for file_storage_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/domain/matching_service.py`

- **Filename:** `matching_service.py` (.py)
- **Lines / Size:** 48 lines (1924 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for matching_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/domain/sla_service.py`

- **Filename:** `sla_service.py` (.py)
- **Lines / Size:** 28 lines (1082 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for sla_service
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

`Backend/services/domain/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (27 bytes)
- **Primary Responsibility:** Business logic & SQL persistence for **init**
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Backend Business Services`.

Backend Utilities & Middleware (13 files)

`Backend/middleware/rate_limiter.py`

- **Filename:** `rate_limiter.py` (.py)
- **Lines / Size:** 107 lines (3576 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/middleware/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (22 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/db.py`

- **Filename:** `db.py` (.py)
- **Lines / Size:** 25 lines (739 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/email.py`

- **Filename:** `email.py` (.py)
- **Lines / Size:** 147 lines (6183 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/excel_importer.py`

- **Filename:** `excel_importer.py` (.py)
- **Lines / Size:** 234 lines (9720 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/helper.py`

- **Filename:** `helper.py` (.py)
- **Lines / Size:** 33 lines (743 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/logger.py`

- **Filename:** `logger.py` (.py)
- **Lines / Size:** 34 lines (883 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/pagination.py`

- **Filename:** `pagination.py` (.py)
- **Lines / Size:** 21 lines (660 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/passwords.py`

- **Filename:** `passwords.py` (.py)
- **Lines / Size:** 65 lines (2134 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/response.py`

- **Filename:** `response.py` (.py)
- **Lines / Size:** 20 lines (658 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/validation.py`

- **Filename:** `validation.py` (.py)
- **Lines / Size:** 31 lines (747 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/websocket_manager.py`

- **Filename:** `websocket_manager.py` (.py)
- **Lines / Size:** 94 lines (3868 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

`Backend/utils/__init__.py`

- **Filename:** `__init__.py` (.py)
- **Lines / Size:** 1 lines (2 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Backend Utilities & Middleware`.

Backend Automated Test Suites (31 files)

`Backend/tests/conftest.py`

- **Filename:** `conftest.py` (.py)
- **Lines / Size:** 41 lines (1287 bytes)
- **Primary Responsibility:** Automated test suite verifying conftest
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/e2e_workflow_test.py`

- **Filename:** `e2e_workflow_test.py` (.py)
- **Lines / Size:** 532 lines (18127 bytes)
- **Primary Responsibility:** Automated test suite verifying e2e_workflow_test
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/run_all_tests.py`

- **Filename:** `run_all_tests.py` (.py)
- **Lines / Size:** 55 lines (2366 bytes)
- **Primary Responsibility:** Automated test suite verifying run_all_tests
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/smoke_test.py`

- **Filename:** `smoke_test.py` (.py)
- **Lines / Size:** 135 lines (4728 bytes)
- **Primary Responsibility:** Automated test suite verifying smoke_test
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_attachment_security.py`

- **Filename:** `test_attachment_security.py` (.py)
- **Lines / Size:** 68 lines (2665 bytes)
- **Primary Responsibility:** Automated test suite verifying test_attachment_security
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_audit_logs.py`

- **Filename:** `test_audit_logs.py` (.py)
- **Lines / Size:** 31 lines (1056 bytes)
- **Primary Responsibility:** Automated test suite verifying test_audit_logs
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_chat.py`

- **Filename:** `test_chat.py` (.py)
- **Lines / Size:** 118 lines (3800 bytes)
- **Primary Responsibility:** Automated test suite verifying test_chat
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_concurrency.py`

- **Filename:** `test_concurrency.py` (.py)
- **Lines / Size:** 63 lines (2099 bytes)
- **Primary Responsibility:** Automated test suite verifying test_concurrency
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_directive_features.py`

- **Filename:** `test_directive_features.py` (.py)
- **Lines / Size:** 211 lines (8071 bytes)
- **Primary Responsibility:** Automated test suite verifying test_directive_features
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_password_persistence_regression.py`

- **Filename:** `test_password_persistence_regression.py` (.py)
- **Lines / Size:** 401 lines (14480 bytes)
- **Primary Responsibility:** Automated test suite verifying test_password_persistence_regression
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_personal_chat.py`

- **Filename:** `test_personal_chat.py` (.py)
- **Lines / Size:** 204 lines (7519 bytes)
- **Primary Responsibility:** Automated test suite verifying test_personal_chat
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_role_location_assignment.py`

- **Filename:** `test_role_location_assignment.py` (.py)
- **Lines / Size:** 421 lines (16220 bytes)
- **Primary Responsibility:** Automated test suite verifying test_role_location_assignment
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_security_audit_suite.py`

- **Filename:** `test_security_audit_suite.py` (.py)
- **Lines / Size:** 1035 lines (47822 bytes)
- **Primary Responsibility:** Automated test suite verifying test_security_audit_suite
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_user_lifecycle_location_recyclebin.py`

- **Filename:** `test_user_lifecycle_location_recyclebin.py` (.py)

- **Lines / Size:** 260 lines (9461 bytes)
- **Primary Responsibility:** Automated test suite verifying test_user_lifecycle_location_recyclebin
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow10_reports.py`

- **Filename:** `test_workflow10_reports.py` (.py)
- **Lines / Size:** 64 lines (2132 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow10_reports
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow11_audit.py`

- **Filename:** `test_workflow11_audit.py` (.py)
- **Lines / Size:** 57 lines (1989 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow11_audit
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow12_settings.py`

- **Filename:** `test_workflow12_settings.py` (.py)
- **Lines / Size:** 62 lines (2205 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow12_settings
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow13_database.py`

- **Filename:** `test_workflow13_database.py` (.py)
- **Lines / Size:** 42 lines (1316 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow13_database
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow14_api_standards.py`

- **Filename:** `test_workflow14_api_standards.py` (.py)
- **Lines / Size:** 38 lines (1104 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow14_api_standards
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow15_architecture.py`

- **Filename:** `test_workflow15_architecture.py` (.py)
- **Lines / Size:** 38 lines (1468 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow15_architecture
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow16_super_admin.py`

- **Filename:** `test_workflow16_super_admin.py` (.py)
- **Lines / Size:** 213 lines (8383 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow16_super_admin
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow1_auth.py`

- **Filename:** `test_workflow1_auth.py` (.py)
- **Lines / Size:** 107 lines (4318 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow1_auth
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow2_user_management.py`

- **Filename:** `test_workflow2_user_management.py` (.py)
- **Lines / Size:** 148 lines (5443 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow2_user_management

- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow4_complaint_management.py`

- **Filename:** `test_workflow4_complaint_management.py` (.py)
- **Lines / Size:** 244 lines (9815 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow4_complaint_management
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow5_public_complaints.py`

- **Filename:** `test_workflow5_public_complaints.py` (.py)
- **Lines / Size:** 99 lines (4125 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow5_public_complaints
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow6_lost_found.py`

- **Filename:** `test_workflow6_lost_found.py` (.py)
- **Lines / Size:** 237 lines (9313 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow6_lost_found
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow7_notifications.py`

- **Filename:** `test_workflow7_notifications.py` (.py)
- **Lines / Size:** 87 lines (3081 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow7_notifications
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow7_workload_resolved.py`

- **Filename:** `test_workflow7_workload_resolved.py` (.py)
- **Lines / Size:** 109 lines (4282 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow7_workload_resolved
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow8_announcements.py`

- **Filename:** `test_workflow8_announcements.py` (.py)
- **Lines / Size:** 180 lines (7007 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow8_announcements
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow8_lost_found_deletion_cascade.py`

- **Filename:** `test_workflow8_lost_found_deletion_cascade.py` (.py)
- **Lines / Size:** 101 lines (4397 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow8_lost_found_deletion_cascade
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

`Backend/tests/test_workflow9_dashboard.py`

- **Filename:** `test_workflow9_dashboard.py` (.py)
- **Lines / Size:** 108 lines (4409 bytes)
- **Primary Responsibility:** Automated test suite verifying test_workflow9_dashboard
- **Operational Status:** `Test`
- **Architectural Role:** Core component in `Backend Automated Test Suites`.

Backend Scripts & Maintenance (23 files)

`Backend/scripts/audit_run_summary.json`

- **Filename:** `audit_run_summary.json` (.json)
- **Lines / Size:** 115 lines (3442 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script

- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/check_dashboards.py`

- **Filename:** `check_dashboards.py` (.py)
- **Lines / Size:** 20 lines (865 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/check_dept.py`

- **Filename:** `check_dept.py` (.py)
- **Lines / Size:** 16 lines (608 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/check_other_tables.py`

- **Filename:** `check_other_tables.py` (.py)
- **Lines / Size:** 17 lines (699 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/check_permanent_entities.py`

- **Filename:** `check_permanent_entities.py` (.py)
- **Lines / Size:** 25 lines (791 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/check_relations.py`

- **Filename:** `check_relations.py` (.py)
- **Lines / Size:** 22 lines (1052 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/cleanup_interim.py`

- **Filename:** `cleanup_interim.py` (.py)
- **Lines / Size:** 13 lines (556 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/cleanup_unwanted_users.py`

- **Filename:** `cleanup_unwanted_users.py` (.py)
- **Lines / Size:** 154 lines (6255 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/first_cleanup.py`

- **Filename:** `first_cleanup.py` (.py)
- **Lines / Size:** 59 lines (2481 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/inspect_all_users.py`

- **Filename:** `inspect_all_users.py` (.py)
- **Lines / Size:** 103 lines (3592 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/inspect_candidate_notifs.py`

- **Filename:** `inspect_candidate_notifs.py` (.py)
- **Lines / Size:** 24 lines (959 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/inspect_schema.py`

- **Filename:** `inspect_schema.py` (.py)
- **Lines / Size:** 30 lines (895 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/preview_cleanup.py`

- **Filename:** `preview_cleanup.py` (.py)
- **Lines / Size:** 58 lines (2372 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/preview_second_cleanup.py`

- **Filename:** `preview_second_cleanup.py` (.py)
- **Lines / Size:** 37 lines (1612 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/preview_test_run_artifacts.py`

- **Filename:** `preview_test_run_artifacts.py` (.py)
- **Lines / Size:** 28 lines (1000 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/print_other_roles.py`

- **Filename:** `print_other_roles.py` (.py)
- **Lines / Size:** 12 lines (607 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/run_fresh_tests.py`

- **Filename:** `run_fresh_tests.py` (.py)
- **Lines / Size:** 332 lines (16547 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/second_cleanup.py`

- **Filename:** `second_cleanup.py` (.py)
- **Lines / Size:** 61 lines (2466 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/user_cleanup_summary.json`

- **Filename:** `user_cleanup_summary.json` (.json)
- **Lines / Size:** 95 lines (1952 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/user_inspection_dump.json`

- **Filename:** `user_inspection_dump.json` (.json)

- **Lines / Size:** 1370 lines (34316 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/verify_candidate_test_users.py`

- **Filename:** `verify_candidate_test_users.py` (.py)
- **Lines / Size:** 65 lines (2904 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/verify_final_state.py`

- **Filename:** `verify_final_state.py` (.py)
- **Lines / Size:** 67 lines (2562 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

`Backend/scripts/verify_first_cleanup.py`

- **Filename:** `verify_first_cleanup.py` (.py)
- **Lines / Size:** 39 lines (1261 bytes)
- **Primary Responsibility:** Database maintenance / seed utility script
- **Operational Status:** `Tooling`
- **Architectural Role:** Core component in `Backend Scripts & Maintenance`.

Frontend Application Entry & Config (16 files)

`Frontend/.dockerignore`

- **Filename:** `.dockerignore` ((no ext))
- **Lines / Size:** 6 lines (53 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/.env.example`

- **Filename:** `.env.example` (.example)
- **Lines / Size:** 3 lines (113 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/Dockerfile`

- **Filename:** `Dockerfile` ((no ext))
- **Lines / Size:** 18 lines (533 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/eslint.config.js`

- **Filename:** `eslint.config.js` (.js)
- **Lines / Size:** 21 lines (354 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/index.html`

- **Filename:** `index.html` (.html)
- **Lines / Size:** 12 lines (300 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/package-lock.json`

- **Filename:** `package-lock.json` (.json)

- **Lines / Size:** 5329 lines (180038 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/package.json`

- **Filename:** `package.json` (.json)
- **Lines / Size:** 35 lines (866 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/postcss.config.js`

- **Filename:** `postcss.config.js` (.js)
- **Lines / Size:** 6 lines (98 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/tailwind.config.js`

- **Filename:** `tailwind.config.js` (.js)
- **Lines / Size:** 35 lines (979 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/vite.config.js`

- **Filename:** `vite.config.js` (.js)
- **Lines / Size:** 10 lines (202 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/src/App.jsx`

- **Filename:** `App.jsx` (.jsx)
- **Lines / Size:** 5 lines (112 bytes)
- **Primary Responsibility:** Root React application container & provider shell
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/src/index.css`

- **Filename:** `index.css` (.css)
- **Lines / Size:** 146 lines (3208 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/src/main.jsx`

- **Filename:** `main.jsx` (.jsx)
- **Lines / Size:** 19 lines (560 bytes)
- **Primary Responsibility:** React 19 DOM bootstrap & root mounting
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/src/api/axios.js`

- **Filename:** `axios.js` (.js)
- **Lines / Size:** 61 lines (1996 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/src/__tests__/App.test.jsx`

- **Filename:** `App.test.jsx` (.jsx)
- **Lines / Size:** 14 lines (481 bytes)
- **Primary Responsibility:** Application configuration or script

- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

`Frontend/src/__tests__/Component.test.jsx`

- **Filename:** `Component.test.jsx` (.jsx)
- **Lines / Size:** 32 lines (1412 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Application Entry & Config`.

Frontend UI Components (18 files)

`Frontend/src/components/Badge.jsx`

- **Filename:** `Badge.jsx` (.jsx)
- **Lines / Size:** 26 lines (1339 bytes)
- **Primary Responsibility:** Reusable UI component (Badge)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Button.jsx`

- **Filename:** `Button.jsx` (.jsx)
- **Lines / Size:** 50 lines (2313 bytes)
- **Primary Responsibility:** Reusable UI component (Button)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Card.jsx`

- **Filename:** `Card.jsx` (.jsx)
- **Lines / Size:** 15 lines (589 bytes)
- **Primary Responsibility:** Reusable UI component (Card)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/ChatWindow.jsx`

- **Filename:** `ChatWindow.jsx` (.jsx)
- **Lines / Size:** 150 lines (4769 bytes)
- **Primary Responsibility:** Reusable UI component (ChatWindow)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/ConfirmDialog.jsx`

- **Filename:** `ConfirmDialog.jsx` (.jsx)
- **Lines / Size:** 26 lines (709 bytes)
- **Primary Responsibility:** Reusable UI component (ConfirmDialog)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/DashboardChart.jsx`

- **Filename:** `DashboardChart.jsx` (.jsx)
- **Lines / Size:** 181 lines (4466 bytes)
- **Primary Responsibility:** Reusable UI component (DashboardChart)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/EmptyState.jsx`

- **Filename:** `EmptyState.jsx` (.jsx)
- **Lines / Size:** 38 lines (1406 bytes)
- **Primary Responsibility:** Reusable UI component (EmptyState)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Input.jsx`

- **Filename:** `Input.jsx` (.jsx)
- **Lines / Size:** 70 lines (2861 bytes)
- **Primary Responsibility:** Reusable UI component (Input)

- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Loader.jsx`

- **Filename:** `Loader.jsx` (.jsx)
- **Lines / Size:** 25 lines (1197 bytes)
- **Primary Responsibility:** Reusable UI component (Loader)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Modal.jsx`

- **Filename:** `Modal.jsx` (.jsx)
- **Lines / Size:** 54 lines (2345 bytes)
- **Primary Responsibility:** Reusable UI component (Modal)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/PageHeader.jsx`

- **Filename:** `PageHeader.jsx` (.jsx)
- **Lines / Size:** 19 lines (709 bytes)
- **Primary Responsibility:** Reusable UI component (PageHeader)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/SearchBar.jsx`

- **Filename:** `SearchBar.jsx` (.jsx)
- **Lines / Size:** 15 lines (554 bytes)
- **Primary Responsibility:** Reusable UI component (SearchBar)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Select.jsx`

- **Filename:** `Select.jsx` (.jsx)
- **Lines / Size:** 30 lines (1283 bytes)
- **Primary Responsibility:** Reusable UI component (Select)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/StatCard.jsx`

- **Filename:** `StatCard.jsx` (.jsx)
- **Lines / Size:** 46 lines (1679 bytes)
- **Primary Responsibility:** Reusable UI component (StatCard)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Table.jsx`

- **Filename:** `Table.jsx` (.jsx)
- **Lines / Size:** 164 lines (7072 bytes)
- **Primary Responsibility:** Reusable UI component (Table)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/TableToolbar.jsx`

- **Filename:** `TableToolbar.jsx` (.jsx)
- **Lines / Size:** 62 lines (2035 bytes)
- **Primary Responsibility:** Reusable UI component (TableToolbar)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Textarea.jsx`

- **Filename:** `Textarea.jsx` (.jsx)
- **Lines / Size:** 28 lines (1146 bytes)
- **Primary Responsibility:** Reusable UI component (Textarea)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

`Frontend/src/components/Toast.jsx`

- **Filename:** `Toast.jsx` (.jsx)
- **Lines / Size:** 29 lines (1384 bytes)
- **Primary Responsibility:** Reusable UI component (Toast)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend UI Components`.

Frontend View Pages (40 files)

`Frontend/src/pages/AccessDeniedPage.jsx`

- **Filename:** `AccessDeniedPage.jsx` (.jsx)
- **Lines / Size:** 31 lines (1247 bytes)
- **Primary Responsibility:** React view component rendering AccessDeniedPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/AnalyticsPage.jsx`

- **Filename:** `AnalyticsPage.jsx` (.jsx)
- **Lines / Size:** 530 lines (20320 bytes)
- **Primary Responsibility:** React view component rendering AnalyticsPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/AnnouncementPage.jsx`

- **Filename:** `AnnouncementPage.jsx` (.jsx)
- **Lines / Size:** 745 lines (28927 bytes)
- **Primary Responsibility:** React view component rendering AnnouncementPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/BackupManagementPage.jsx`

- **Filename:** `BackupManagementPage.jsx` (.jsx)
- **Lines / Size:** 500 lines (18263 bytes)
- **Primary Responsibility:** React view component rendering BackupManagementPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/FeedbackPage.jsx`

- **Filename:** `FeedbackPage.jsx` (.jsx)
- **Lines / Size:** 522 lines (19610 bytes)
- **Primary Responsibility:** React view component rendering FeedbackPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/GlobalSearchPage.jsx`

- **Filename:** `GlobalSearchPage.jsx` (.jsx)
- **Lines / Size:** 443 lines (16310 bytes)
- **Primary Responsibility:** React view component rendering GlobalSearchPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/LostFoundPage.jsx`

- **Filename:** `LostFoundPage.jsx` (.jsx)
- **Lines / Size:** 680 lines (26222 bytes)
- **Primary Responsibility:** React view component rendering LostFoundPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/NotFoundPage.jsx`

- **Filename:** `NotFoundPage.jsx` (.jsx)
- **Lines / Size:** 31 lines (1212 bytes)
- **Primary Responsibility:** React view component rendering NotFoundPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/NotificationsPage.jsx`

- **Filename:** `NotificationsPage.jsx` (.jsx)
- **Lines / Size:** 616 lines (25686 bytes)
- **Primary Responsibility:** React view component rendering NotificationsPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/ProfilePage.jsx`

- **Filename:** `ProfilePage.jsx` (.jsx)
- **Lines / Size:** 505 lines (20671 bytes)
- **Primary Responsibility:** React view component rendering ProfilePage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/ReportsPage.jsx`

- **Filename:** `ReportsPage.jsx` (.jsx)
- **Lines / Size:** 307 lines (11314 bytes)
- **Primary Responsibility:** React view component rendering ReportsPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/AdminDashboard.jsx`

- **Filename:** `AdminDashboard.jsx` (.jsx)
- **Lines / Size:** 318 lines (12587 bytes)
- **Primary Responsibility:** React view component rendering AdminDashboard UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/AuditLogPage.jsx`

- **Filename:** `AuditLogPage.jsx` (.jsx)
- **Lines / Size:** 439 lines (15451 bytes)
- **Primary Responsibility:** React view component rendering AuditLogPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/DataCleanupPage.jsx`

- **Filename:** `DataCleanupPage.jsx` (.jsx)
- **Lines / Size:** 497 lines (20546 bytes)
- **Primary Responsibility:** React view component rendering DataCleanupPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/DepartmentManagementPage.jsx`

- **Filename:** `DepartmentManagementPage.jsx` (.jsx)
- **Lines / Size:** 709 lines (24451 bytes)
- **Primary Responsibility:** React view component rendering DepartmentManagementPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/IssueManagementPage.jsx`

- **Filename:** `IssueManagementPage.jsx` (.jsx)
- **Lines / Size:** 263 lines (9779 bytes)
- **Primary Responsibility:** React view component rendering IssueManagementPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/LocationManagementPage.jsx`

- **Filename:** `LocationManagementPage.jsx` (.jsx)
- **Lines / Size:** 1499 lines (48447 bytes)
- **Primary Responsibility:** React view component rendering LocationManagementPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/SystemSettingsPage.jsx`

- **Filename:** `SystemSettingsPage.jsx` (.jsx)

- **Lines / Size:** 420 lines (14382 bytes)
- **Primary Responsibility:** React view component rendering SystemSettingsPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/TechnicalSupportPage.jsx`

- **Filename:** `TechnicalSupportPage.jsx` (.jsx)
- **Lines / Size:** 207 lines (7898 bytes)
- **Primary Responsibility:** React view component rendering TechnicalSupportPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/admin/UserManagementPage.jsx`

- **Filename:** `UserManagementPage.jsx` (.jsx)
- **Lines / Size:** 1764 lines (79653 bytes)
- **Primary Responsibility:** React view component rendering UserManagementPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/auth/ActivateAccountPage.jsx`

- **Filename:** `ActivateAccountPage.jsx` (.jsx)
- **Lines / Size:** 211 lines (8469 bytes)
- **Primary Responsibility:** React view component rendering ActivateAccountPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/auth/ChangePasswordPage.jsx`

- **Filename:** `ChangePasswordPage.jsx` (.jsx)
- **Lines / Size:** 131 lines (4335 bytes)
- **Primary Responsibility:** React view component rendering ChangePasswordPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/auth/ForgotPasswordPage.jsx`

- **Filename:** `ForgotPasswordPage.jsx` (.jsx)
- **Lines / Size:** 263 lines (9416 bytes)
- **Primary Responsibility:** React view component rendering ForgotPasswordPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/auth/LoginPage.jsx`

- **Filename:** `LoginPage.jsx` (.jsx)
- **Lines / Size:** 186 lines (7048 bytes)
- **Primary Responsibility:** React view component rendering LoginPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/chat/ChatPage.jsx`

- **Filename:** `ChatPage.jsx` (.jsx)
- **Lines / Size:** 672 lines (28445 bytes)
- **Primary Responsibility:** React view component rendering ChatPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/chat/InboxPage.jsx`

- **Filename:** `InboxPage.jsx` (.jsx)
- **Lines / Size:** 58 lines (1700 bytes)
- **Primary Responsibility:** React view component rendering InboxPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/complaints/ComplaintDetailsPage.jsx`

- **Filename:** `ComplaintDetailsPage.jsx` (.jsx)
- **Lines / Size:** 1649 lines (67348 bytes)
- **Primary Responsibility:** React view component rendering ComplaintDetailsPage UI

- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/complaints/ComplaintListPage.jsx`

- **Filename:** `ComplaintListPage.jsx` (.jsx)
- **Lines / Size:** 809 lines (30874 bytes)
- **Primary Responsibility:** React view component rendering ComplaintListPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/complaints/PublicComplaintsPage.jsx`

- **Filename:** `PublicComplaintsPage.jsx` (.jsx)
- **Lines / Size:** 1102 lines (46784 bytes)
- **Primary Responsibility:** React view component rendering PublicComplaintsPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/complaints/ResolvedPage.jsx`

- **Filename:** `ResolvedPage.jsx` (.jsx)
- **Lines / Size:** 331 lines (12004 bytes)
- **Primary Responsibility:** React view component rendering ResolvedPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/complaints/WorkloadPage.jsx`

- **Filename:** `WorkloadPage.jsx` (.jsx)
- **Lines / Size:** 501 lines (18746 bytes)
- **Primary Responsibility:** React view component rendering WorkloadPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/coordinator/CoordinatorDashboard.jsx`

- **Filename:** `CoordinatorDashboard.jsx` (.jsx)
- **Lines / Size:** 328 lines (12622 bytes)
- **Primary Responsibility:** React view component rendering CoordinatorDashboard UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/location/LocationDashboard.jsx`

- **Filename:** `LocationDashboard.jsx` (.jsx)
- **Lines / Size:** 321 lines (12945 bytes)
- **Primary Responsibility:** React view component rendering LocationDashboard UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/manager/ManagerDashboard.jsx`

- **Filename:** `ManagerDashboard.jsx` (.jsx)
- **Lines / Size:** 312 lines (12319 bytes)
- **Primary Responsibility:** React view component rendering ManagerDashboard UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/student/CreateComplaintPage.jsx`

- **Filename:** `CreateComplaintPage.jsx` (.jsx)
- **Lines / Size:** 659 lines (25930 bytes)
- **Primary Responsibility:** React view component rendering CreateComplaintPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/student/StudentDashboard.jsx`

- **Filename:** `StudentDashboard.jsx` (.jsx)
- **Lines / Size:** 323 lines (12397 bytes)
- **Primary Responsibility:** React view component rendering StudentDashboard UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/superadmin/InstitutionRegistryPage.jsx`

- **Filename:** `InstitutionRegistryPage.jsx` (.jsx)
- **Lines / Size:** 195 lines (7306 bytes)
- **Primary Responsibility:** React view component rendering InstitutionRegistryPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/superadmin/PlatformHealthPage.jsx`

- **Filename:** `PlatformHealthPage.jsx` (.jsx)
- **Lines / Size:** 131 lines (5773 bytes)
- **Primary Responsibility:** React view component rendering PlatformHealthPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/superadmin/PlatformSupportPage.jsx`

- **Filename:** `PlatformSupportPage.jsx` (.jsx)
- **Lines / Size:** 209 lines (8127 bytes)
- **Primary Responsibility:** React view component rendering PlatformSupportPage UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

`Frontend/src/pages/superadmin/SuperAdminDashboard.jsx`

- **Filename:** `SuperAdminDashboard.jsx` (.jsx)
- **Lines / Size:** 162 lines (7145 bytes)
- **Primary Responsibility:** React view component rendering SuperAdminDashboard UI
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend View Pages`.

Frontend API Services (19 files)

`Frontend/src/services/analyticsService.js`

- **Filename:** `analyticsService.js` (.js)
- **Lines / Size:** 19 lines (877 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for analyticsService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/announcementService.js`

- **Filename:** `announcementService.js` (.js)
- **Lines / Size:** 37 lines (1669 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for announcementService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/attachmentService.js`

- **Filename:** `attachmentService.js` (.js)
- **Lines / Size:** 25 lines (866 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for attachmentService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/auditService.js`

- **Filename:** `auditService.js` (.js)
- **Lines / Size:** 18 lines (672 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for auditService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/authService.js`

- **Filename:** `authService.js` (.js)
- **Lines / Size:** 19 lines (882 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for authService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/backupService.js`

- **Filename:** `backupService.js` (.js)
- **Lines / Size:** 15 lines (733 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for backupService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/chatService.js`

- **Filename:** `chatService.js` (.js)
- **Lines / Size:** 18 lines (719 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for chatService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/complaintService.js`

- **Filename:** `complaintService.js` (.js)
- **Lines / Size:** 50 lines (2496 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for complaintService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/departmentService.js`

- **Filename:** `departmentService.js` (.js)
- **Lines / Size:** 23 lines (1118 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for departmentService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/feedbackService.js`

- **Filename:** `feedbackService.js` (.js)
- **Lines / Size:** 19 lines (839 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for feedbackService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/locationService.js`

- **Filename:** `locationService.js` (.js)
- **Lines / Size:** 32 lines (1452 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for locationService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/lostFoundService.js`

- **Filename:** `lostFoundService.js` (.js)
- **Lines / Size:** 17 lines (679 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for lostFoundService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/notificationService.js`

- **Filename:** `notificationService.js` (.js)
- **Lines / Size:** 18 lines (827 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for notificationService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/programService.js`

- **Filename:** `programService.js` (.js)
- **Lines / Size:** 7 lines (246 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for programService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/reportService.js`

- **Filename:** `reportService.js` (.js)

- **Lines / Size:** 15 lines (713 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for reportService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/searchService.js`

- **Filename:** `searchService.js` (.js)
- **Lines / Size:** 15 lines (612 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for searchService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/settingsService.js`

- **Filename:** `settingsService.js` (.js)
- **Lines / Size:** 21 lines (1006 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for settingsService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/supervisorService.js`

- **Filename:** `supervisorService.js` (.js)
- **Lines / Size:** 5 lines (136 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for supervisorService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

`Frontend/src/services/userService.js`

- **Filename:** `userService.js` (.js)
- **Lines / Size:** 49 lines (2098 bytes)
- **Primary Responsibility:** Axios HTTP service wrapper for userService
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend API Services`.

Frontend Routing & Layouts (6 files)

`Frontend/src/layouts/Footer.jsx`

- **Filename:** `Footer.jsx` (.jsx)
- **Lines / Size:** 47 lines (1670 bytes)
- **Primary Responsibility:** Application shell layout (Footer)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Routing & Layouts`.

`Frontend/src/layouts/MainLayout.jsx`

- **Filename:** `MainLayout.jsx` (.jsx)
- **Lines / Size:** 26 lines (973 bytes)
- **Primary Responsibility:** Application shell layout (MainLayout)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Routing & Layouts`.

`Frontend/src/layouts/Navbar.jsx`

- **Filename:** `Navbar.jsx` (.jsx)
- **Lines / Size:** 547 lines (23297 bytes)
- **Primary Responsibility:** Application shell layout (Navbar)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Routing & Layouts`.

`Frontend/src/layouts/Sidebar.jsx`

- **Filename:** `Sidebar.jsx` (.jsx)
- **Lines / Size:** 412 lines (15274 bytes)
- **Primary Responsibility:** Application shell layout (Sidebar)
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Routing & Layouts`.

`Frontend/src/routes/AppRoutes.jsx`

- **Filename:** `AppRoutes.jsx` (.jsx)

- **Lines / Size:** 399 lines (13371 bytes)
- **Primary Responsibility:** React client routing and RBAC guard
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Routing & Layouts`.

`Frontend/src/routes/ProtectedRoute.jsx`

- **Filename:** `ProtectedRoute.jsx` (.jsx)
- **Lines / Size:** 22 lines (793 bytes)
- **Primary Responsibility:** React client routing and RBAC guard
- **Operational Status:** `Active`
- **Architectural Role:** Core component in `Frontend Routing & Layouts`.

Frontend Hooks, Context & Utilities (7 files)

`Frontend/src/context/AuthContext.jsx`

- **Filename:** `AuthContext.jsx` (.jsx)
- **Lines / Size:** 219 lines (6458 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

`Frontend/src/context/ThemeContext.jsx`

- **Filename:** `ThemeContext.jsx` (.jsx)
- **Lines / Size:** 94 lines (2813 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

`Frontend/src/hooks/useAsyncData.js`

- **Filename:** `useAsyncData.js` (.js)
- **Lines / Size:** 26 lines (728 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

`Frontend/src/utils/constants.js`

- **Filename:** `constants.js` (.js)
- **Lines / Size:** 20 lines (569 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

`Frontend/src/utils/dateFormatter.js`

- **Filename:** `dateFormatter.js` (.js)
- **Lines / Size:** 14 lines (417 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

`Frontend/src/utils/search.js`

- **Filename:** `search.js` (.js)
- **Lines / Size:** 9 lines (244 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

`Frontend/src/utils/statusColor.js`

- **Filename:** `statusColor.js` (.js)
- **Lines / Size:** 34 lines (1264 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Frontend Hooks, Context & Utilities`.

Storage & Binary Assets (255 files)

`Backend/storage/campus_pulse.db`

- **Filename:** `campus_pulse.db` (.db)
- **Lines / Size:** 26556 lines (9216000 bytes)
- **Primary Responsibility:** SQLite persistence database file
- **Operational Status:** `Storage`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/campus_pulse_audit_baseline.db`

- **Filename:** `campus_pulse_audit_baseline.db` (.db)
- **Lines / Size:** 24529 lines (7307264 bytes)
- **Primary Responsibility:** SQLite persistence database file
- **Operational Status:** `Storage`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/campus_pulse_backup_pre_scope_baseline_20260813_195935.db`

- **Filename:** `campus_pulse_backup_pre_scope_baseline_20260813_195935.db` (.db)
- **Lines / Size:** 12877 lines (5181440 bytes)
- **Primary Responsibility:** SQLite persistence database file
- **Operational Status:** `Storage`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/campus_pulse_backup_pre_superadmin.db`

- **Filename:** `campus_pulse_backup_pre_superadmin.db` (.db)
- **Lines / Size:** 21573 lines (6680576 bytes)
- **Primary Responsibility:** SQLite persistence database file
- **Operational Status:** `Storage`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/pytest_isolated.db`

- **Filename:** `pytest_isolated.db` (.db)
- **Lines / Size:** 26567 lines (9216000 bytes)
- **Primary Responsibility:** SQLite persistence database file
- **Operational Status:** `Storage`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/sqlite_repository.py`

- **Filename:** `sqlite_repository.py` (.py)
- **Lines / Size:** 3907 lines (176946 bytes)
- **Primary Responsibility:** Application configuration or script
- **Operational Status:** `Config`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/attachments/complaint_CMP-006390AA_additional_ATT-C0FC614A.jpg`

- **Filename:** `complaint_CMP-006390AA_additional_ATT-C0FC614A.jpg` (.jpg)
- **Lines / Size:** 1 lines (11 bytes)
- **Primary Responsibility:** Binary media attachment / evidence file
- **Operational Status:** `Asset`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/attachments/complaint_CMP-00730FA3_additional_ATT-26936B3B.jpg`

- **Filename:** `complaint_CMP-00730FA3_additional_ATT-26936B3B.jpg` (.jpg)
- **Lines / Size:** 1 lines (11 bytes)
- **Primary Responsibility:** Binary media attachment / evidence file
- **Operational Status:** `Asset`
- **Architectural Role:** Core component in `Storage & Binary Assets`.

`Backend/storage/attachments/complaint_CMP-021B6A6A_additional_ATT-CC5700A8.jpg`

- **Filename:** `complaint_CMP-021B6A6A_additional_ATT-CC5700A8.jpg` (.jpg)
- **Lines / Size:** 1 lines (11 bytes)
- **Primary Responsibility:** Binary media attachment / evidence file
- **Operational Status:** `Asset`
- **Architectural Role:** Core component in `Storage & Binary Assets`.
